Summary in respect of the Issuer

General Information about SolarWorld Aktiengesellschaft and SolarWorld Group

SolarWorld Aktiengesellschaft ("SolarWorld", and together with its subsidiaries and affiliates the "SolarWorld Group") is the parent company of SolarWorld Group performing the function of a holding company. It is listed in the prime standard of Frankfurt Stock Exchange (TecDAX).

SolarWorld Group is one of the world leaders in the manufacture of crystalline solar power technology. Today, SolarWorld Aktiengesellschaft and its subsidiaries research, develop, produce and recycle at all stages of the solar value creation chain: from the generation of silicon via wafer, cell and module production all the way to systems solutions in on-grid and off-grid technology. The business model concentrates on the core business of solar power technology. SolarWorld Group emphasises on solar power applications ranging from roofs to large-scale solar power plants in the worldwide solar markets. At the same time, SolarWorld Group also promotes access to energy in regions all over the world that are far removed from grids.

History, Incorporation and Seat

The origins of SolarWorld trace back to the sole proprietorship (*Einzelfirma*) Frank H. Asbeck, Ingenieurbüro für Industrieanlagen founded 1988 and registered with the commercial register (*Handelsregister*) of the local court (*Amtsgericht*) Bonn under HRA 3761. As a result of the expansion of its business activities, SolarWorld Aktiengesellschaft was founded to which the whole business unit photovoltaic trading and plant construction was transferred. As a stock corporation under German law

SolarWorld Aktiengesellschaft was registered with the commercial register (*Handelsregister*) of the local court (*Amtsgericht*) Bonn under HRB 8319 on 26 March 1999. SolarWorld's headquarters is located in Bonn, Germany; the registered office is located in Martin-Luther-King-Straße 24, 53175 Bonn, Germany, telephone number: +49 (0) 228 559 20 0.

The fiscal year of SolarWorld is the calendar year.

Corporate Purpose

Article 2 of SolarWorld's Articles of Association (*Satzung*) define the company's purpose as:

1. The corporate purpose of the company comprises plant engineering and construction, product development, manufacturing of modules and components as well as trading in these products in the photovoltaic business, the planning/design, construction and operation of, and the trading with, wind power plants, as well as power trading.
2. The company is authorised to engage in any business and to take measures which serve this corporate purpose. To this end, it may also establish, acquire or invest in other companies.

Organisational Structure

SolarWorld Group is headed by SolarWorld, which as the holding company provides centralised business services to the group, such as leadership, steering and control functions in the areas of strategic group development, mergers & acquisition, finance, controlling, corporate communication, marketing as well as sustainability management as a staff position under the group management board.

At the date of this Prospectus, SolarWorld Group consists of a total of 56 companies. SolarWorld entered into profit and loss transfer agreements with all major wholly owned subsidiaries in Germany.

Business Overview – Principal Activities and Principal Markets

General

SolarWorld Group is one of the world leaders in the manufacture of crystalline solar power technology, whose integrated value creation chain ranges from raw material to the turn-key solar plant. Thus, it concentrates on the core business of solar power technology and operates in four operating segments that take global business activities as well as the SolarWorld Group organisation into account: "Production Germany", "Production U.S.", "Trade" and "Other", which reflect the strategic orientation as well as the predominant internal organisation, reporting and control structure of the group.

With a total of 11 sites worldwide (including operating sites, joint ventures and the holding company), SolarWorld Group is today present on the internationally relevant solar markets. SolarWorld Group operates with production facilities in Germany, the USA, and South Korea on the core solar markets of Europe, North America, and Asia, which keeps transport distances short and logistics cost low. Sales teams in Germany, Spain, France, the USA, Singapore, and South Africa are trying to push ahead distribution in the solar growth regions.

Production Germany and Production U.S.

SolarWorld Group's production ranges across the value creation chain from silicon to the finished module. The integrated production leads to process transparency and facilitates process control and optimisation.

Raw Material Production and Recycling Activities

The first stage of the solar value creation chain is the production of silicon. Silicon is the most important raw material of the photovoltaic industry. Besides long-term silicon contracts, Solarworld Group's own silicon production and recycling activities stabilise the necessary raw material position and costs. Under the coverage of Sunicon GmbH, the group's raw material activities are pooled. Sunicon GmbH is responsible for securing the strategic long-term supply of silicon.

Within the framework of the Joint Venture, JSSI GmbH, Freiberg, Germany ("JSSI") with Evonik Degussa GmbH (SolarWorld: 49%), processes in industrial silicon production are evaluated and developed with regard to their feasibility and economy. In 2010, JSSI produced 660 tonnes solar-

grade silicon under the brand **Sunsil®**, which SolarWorld used as raw material basis for the subsequent wafer production.

The broad range of recycling activities ranges from by-products of solar and semiconductor production and processing via wafer and cell scrap all the way to the recycling of all commercially available solar modules.

With the creation of the joint venture **Qatar Solar Technologies Q.S.C.** (SolarWorld: 29%) in the year 2010, SolarWorld expects to strengthen its future silicon production activities. SolarWorld plans to use the first silicon supplies from this joint venture from 2012/2013 and beyond.

Production of Wafers, Cells and Modules

The second stage of the production value creation chain is the wafer manufacturing. In a polycrystalline process the silicon is crystallised in square blocks, cut into columns and sawn into wafers with the help of modern wire sawing technology.

During the cell production process, the wafers are further processed in fully automatic processing plants under clean room conditions into multi- and mono-crystalline solar cells.

In the final step of the value creation chain the solar cells are soldered into cell strings, which are connected into a matrix, laminated, equipped with a patented connecting socket on the rear of the laminate and finally pressed into an aluminium frame, thus creating a solar module. The products of the module manufacturing of SolarWorld are then completely transferred into the Trading segment, where they are sold to external customers.

Segment "Other"

Research and Development

The key innovation task of Solar World Group's research and development activities is to continually reduce the cost of solar power by means of improvements in processes and products. They cover the entire value creation chain and are pooled together under the wholly-owned subsidiary **SolarWorld Innovations GmbH**.

Trade

Products in the Trading segment include the solar system kits consisting of the selected module type, the inverter to match, the assembly rack required for the roof-shape as well as additional accessories. SolarWorld also specialises in the planning and construction of large-scales solar power plants.

Distribution is organised in a three-stage system. The wholesale trade supplies specialised companies on the spot such as electricians, roofer, heating and sanitarian technicians. At the second stage SolarWorld distributes its products through other trading firms that are specialised in photovoltaic for a long time. SolarWorld sells its products also directly to retail customers, whereas the processing of orders will be realised by technical firms on the spot.

Management and Supervisory Bodies

SolarWorld's governance bodies include its Management Board (*Vorstand*), which currently consists of four members and its Supervisory Board (*Aufsichtsrat*), which consists of three members.

Except as disclosed in this Prospectus, none of the members of the Supervisory Board or the Management Board of SolarWorld has any potential conflicts of interests between any duties regarding SolarWorld and their private interests or other duties. The members of the Supervisory Board and of the Management Board can be contacted at the address of the headquarters of SolarWorld.

Significant Changes/Trend Information

Except as disclosed in this Prospectus, there have been neither significant changes in the financial or trading position of SolarWorld or SolarWorld Group since 31 March 2011 nor has there been a material adverse change in the prospects of SolarWorld or SolarWorld Group since 31 December 2010.

Legal and Arbitration Proceedings

Except as disclosed in this document there are no, nor have there been any governmental, court or arbitration proceedings (including any proceedings which are pending or threatened of which the Issuer is aware) which may have or have had in the 12 months preceding the date of this document a significant effect on the financial position of SolarWorld or SolarWorld Group.

Summary in respect of Risk Factors

Summary of Risk Factors regarding the Issuer

SolarWorld is the central holding company of the SolarWorld Group. Accordingly, SolarWorld is affected by the same risk factors as those that affect the business and operations of the SolarWorld Group.

SolarWorld's business, and as a result, the value of the Notes, are exposed to a number of risks. The following contains a description of certain risks, which may materially adversely affect SolarWorld's financial position and results of operations.

- Economic conditions have been strongly impacted by tighter financing terms and conditions as a result of the financial crisis. Although the economic situation has stabilised, the International Monetary Fund still identifies high public debt, which might adversely affect the fragile banking sector, as a potential risk¹. In the short term, there might be credit bottlenecks regarding large-scale investment projects. Although large scale projects only constitute a small portion (9%) of the sales of SolarWorld Group, a decline in demand from investors might have a negative effect on SolarWorld Group sales and earnings. Furthermore, falling electricity prices for private households lead to falling propensity among retail customers to invest in solar products, which in turn delays in solar power reaching grid parity and slows down the entering of new markets and, in the medium to long term, might have an effect on the group's business;
- SolarWorld Group's business is subject to changes in laws and regulations whose objective is the promotion of solar power. A reduction in, or even abolition of, financial incentives resulting from such laws and regulations in one or several relevant countries may lead to a slower overall market growth. Declines in demand in the core markets may temporarily impact SolarWorld Group's sales, earnings and cash situation;
- SolarWorld Group is exposed to an intensification of competitive pressure, which tends to harden at all stages of the value creation chain of the solar industry. The therefrom resulting potential loss of market shares and stronger margin pressure due to increased price competition may have adverse effects on sales and earnings of SolarWorld Group;
- Due to current silicon price levels, only few manufacturers of alternative solar power technologies have in fact cost benefits versus crystalline manufacturers and are able to produce on an industrial scale. Moreover, the market for these technologies might also be adversely affected by future regulatory measures, disposal risks, and the finite nature of the raw materials used such as cadmium, tellurium and indium. But potential loss of market shares to competitors and increasing price competition with stronger pressure on margins may adversely affect sales and earnings of SolarWorld Group;
- The manufacture of SolarWorld Group's products requires substantial amounts of silicon and other raw materials (silver, copper, aluminum, etc.). Unchanged or rising procurement costs might cause margin erosion and thus adversely impact earnings if wafer and module prices should fall. Supply bottlenecks can concern kit components and consumables and might adversely affect the cost structure, slow down production processes and thus reduce the earnings of SolarWorld Group;
- The rollout of new products involves conceptual and market risks. Stronger competitive

¹ (Source: Projektgruppe Gemeinschaftsdiagnose, April 2011)

pressure increases the risk of industrial espionage;

- SolarWorld Group is subject to credit risk to the extent that counterparties to transactions may not be able to perform their contractual obligations. Insolvency risk of customers gives rise to additional risks;
- Stronger price pressure and an increase in supply might lead to a lower demand for SolarWorld Group products. Customer with long-term wafer contracts might not meet their purchasing obligations or demand renegotiations;
- SolarWorld Group is dependent upon hiring and retaining highly qualified management and technical personnel;
- SolarWorld Group is subject to the risks associated with its group-wide installed processes. The processes are to a large extent supported by information technology, which gives rise to risks;
- SolarWorld Group is exposed to liquidity risks, to foreign currency and to interest rate risks. Legal risks could realise. Products that have already been launched pose quality risks. Additional tax claims may arise due to different legal positions of the relevant tax authorities;
- SolarWorld Group is subject to environmental risks and the risk of conflicts with stakeholders.

Summary of Risk Factors regarding the Notes

An investment in the Notes involves certain risks associated with the characteristics of the Notes which could lead to substantial losses that Holders would have to bear in the case of selling their Notes or with regard to receiving interest payments and repayment of principal. Those risks include that:

- the Notes may not be a suitable investment for all investors;
- prior to the listing on an stock exchange, there has been no public market for the Notes and there can be no assurance that a liquid secondary market for the Notes will develop or, if it does develop, that it will continue; in an illiquid market, an investor might not be able to sell his Notes at any time at fair market prices;
- the price of the Notes falls as a result of changes in market interest rates;
- market value of the Notes could decrease if the creditworthiness of SolarWorld Group worsens or the shareholder structure of SolarWorld changes or as a result of changes in IFRS and HGB/German Commercial Code standards applicable to SolarWorld;
- the Notes may be subject to early redemption at the aggregate principal amount, if the Issuer becomes obligated to bear withholding taxes which are or will be leviable on payments of principal or interest in respect of the Notes; if the Issuer calls and redeems the Notes in such case, the Holders may only be able to reinvest the redemption proceeds in securities with a lower yield;
- since the Notes provide for majority resolutions of Holders, to be passed in a meeting of Holders, a Holder is subject to the risk of being outvoted by a majority resolution. As resolutions properly adopted are binding on all Holders, certain rights of such Holder against the Issuer under the Terms and Conditions may be amended or reduced or even cancelled;
- since the Notes provide for the appointment of a Holders' Representative, it is possible that a Holder may be deprived of its individual right to pursue and enforce its rights under the Conditions of Issue against the Issuer, such right passing to the Holders' Representative who is then responsible to claim and enforce the rights of all Holders;
- the euro denominated Notes could represent a currency risk for a Holder if the euro represents a foreign currency to such Holder; in addition governments and competent authorities could impose exchange controls in the future; and
- there is no restriction on the amount of debt which the Issuer may incur in the future.

The realisation of one or more of the risks described above may affect the Issuer's ability to fulfil its payment obligations under the Notes and/or lead to a decline in the market price of the Notes, as the case may be.

Zusammenfassung in Bezug auf die Emittentin

Allgemeine Informationen über die SolarWorld Aktiengesellschaft und den SolarWorld Konzern

Die SolarWorld Aktiengesellschaft ("SolarWorld" und gemeinsam mit den Tochtergesellschaften und verbundenen Unternehmen, der "SolarWorld Konzern") ist die Muttergesellschaft des SolarWorld Konzerns und hat die Funktion einer Holding. SolarWorld ist im *Prime Standard* der Frankfurter Wertpapierbörsse (TecDAX) gelistet.

Der SolarWorld Konzern ist einer der weltweit führenden Hersteller kristalliner Solarstromtechnologie. Die SolarWorld Aktiengesellschaft und ihre Tochterunternehmen forschen, entwickeln, produzieren und recyceln heute auf allen Stufen der Solar-Wertschöpfungskette: angefangen bei der Gewinnung von Silizium über den Wafer, die Zelle und die Herstellung von Modulen bis hin zu Systemlösungen im Bereich der "*on-grid*" (Netz-) und "*off-grid*" (netzfernen) Technologie. Das Geschäftsmodell konzentriert sich auf das Kerngeschäft der Solarstromtechnologie. Der Schwerpunkt des SolarWorld Konzerns liegt auf Solarstromanwendungen von Hauseäichern bis zu Großanlagen in den weltweiten Solarmärkten. Gleichzeitig treibt der SolarWorld Konzern den Zugang zu Energie weltweit in Regionen voran, die noch keinen Zugang zu Energiemetzen haben.

Geschäftsüberblick – Hauptaktivitäten und Hauptmärkte

Allgemein

Der SolarWorld Konzern ist einer der weltweit führenden Hersteller kristalliner Solarstromtechnologie, deren integrierte Wertschöpfungskette vom Rohstoff bis hin zur schlüsselfertigen Solaranlage reicht.

Der SolarWorld Konzern konzentriert sich daher auf das Kerngeschäft der Solarstromtechnologie und agiert in vier operativen Segmenten, die sich in: "Produktion Deutschland", "Produktion USA", "Handel" und "Sonstiges" gliedern. Diese bilden die strategische Ausrichtung sowie die interne Organisations-, Berichts- und Steuerungsstruktur ab.

Mit insgesamt 11 Standorten weltweit (inklusive Betriebsstätten, Joint Ventures und die Holdinggesellschaft) ist der SolarWorld Konzern heute in den relevanten internationalen Märkten präsent. Der SolarWorld Konzern operiert mit Produktionsstätten in Deutschland, den USA und Südkorea auf den Kernsolarmärkten Europas, Nordamerikas und Asiens, was Transportwege kurz und Logistikkosten niedrig hält. Vertriebsteams in Deutschland, Spanien, Frankreich, den USA, Singapur und Südafrika versuchen den Absatz in den solaren Wachstumsregionen zu forcieren.

Produktion Deutschland und Produktion USA

Die Fertigung des SolarWorld Konzerns reicht wertschöpfungsübergreifend vom Silizium bis zum fertigen Modul. Die integrierte Produktion schafft Prozeßtransparenz und erleichtert die Prozesskontrolle und -optimierung.

Produktion von Rohstoffen und Recyclingaktivitäten

Die erste Stufe der Solar-Wertschöpfungskette ist die Produktion von Silizium. Silizium ist der wichtigste Rohstoff für die Solarbranche. Neben langfristigen Silizium-Lieferkontrakten, stabilisieren die eigene Siliziumproduktion und Recyclingaktivitäten des SolarWorld Konzerns die notwendige Rohstoffposition und -kosten. Unter dem Dach der Sunicon GmbH bündelt der SolarWorld Konzern seine konzerneigenen Rohstoffaktivitäten. Aufgabe der Sunicon GmbH ist die strategische Sicherung der langfristigen Versorgung mit Silizium.

Im Rahmen des Joint Ventures JSSI GmbH, Freiberg, Germany ("JSSI") mit der Evonik Degussa GmbH (SolarWorld: 49 %) werden Verfahren hinsichtlich ihrer Durchführbarkeit und Wirtschaftlichkeit in der industriellen Siliziumfertigung bewertet und entwickelt. JSSI produzierte in 2010 unter der Marke Sunsil® 660 Tonnen Solarsilizium, welches SolarWorld als Rohmaterialbasis für die anschließende Waferfertigung verwendete.

Die breite Palette der Recyclingaktivitäten reicht von Nebenprodukten der Solar- sowie Halbleiterherstellung und -verarbeitung, über Wafer- und Zellbruch bis zum Recycling aller handelsüblichen Solarmodule.

Mit der Gründung des Joint Ventures Qatar Solar Technologies Q.S.C. (SolarWorld: 29%) in 2010 erwartet SolarWorld seine zukünftigen Silikonproduktionsleistungen zu stärken. SolarWord plant, die ersten Silikonlieferungen aus diesem Joint Venture ab 2012/2013 an zu verwenden.

Produktion von Wafern, Zellen und Modulen

Die zweite Stufe der Wertschöpfungskette betrifft die Herstellung von Wafern. In einem polykristallinen Prozess wird das Silizium zu Blöcken gegossen, in Säulen geschnitten und mit Hilfe einer modernen Drahtsägetechnologie zu Wafern zersägt.

Während des Zellherstellungsprozesses werden die Wafer in vollautomatischen Aufbereitungsanlagen unter Reinraumbedingungen zu Multi- und Mono-kristallinen Solarzellen verarbeitet.

Im letzten Schritt der Wertschöpfungskette entstehen die Solarmodule: Die Solarzellen werden zu Stringern verlotet, diese werden zu einer Matrix verbunden, laminiert, mit einer patentierten Anschlussdose auf der Rückseite des Laminats ausgestattet und schließlich in einen Aluminiumrahmen gepresst. Die Produkte der Modulherstellung werden dann komplett über Geschäftsbereich Handel an externe Kunden verkauft.

Segment "Sonstiges"

Forschung und Entwicklung

Zentrale Innovationsaufgabe der Forschungs- und Entwicklungsaktivitäten des SolarWorld Konzerns ist die kontinuierliche Verringerung der Kosten von Solarenergie durch die Verbesserung der Prozesse und Produkte. Sie erstrecken sich auf die gesamte Wertschöpfungskette und sind in der hundertprozentigen Tochtergesellschaft SolarWorld Innovations GmbH zusammengefasst.

Handel

Zu den Produkten im Geschäftsbereich Handel gehören die Sunkit-Bausätze. Sie bestehen aus dem jeweils ausgewählten Modultyp, dem darauf abgerichteten Wechselrichter, dem für die jeweilige Dachform benötigte Montagesystem sowie entsprechendem Zubehör. Die SolarWorld ist außerdem auf Planung und Bau von solaren Großanlagen spezialisiert.

Der Vertrieb ist in einem drei-stufigen System organisiert. Der Großhandel beliefert ausführende Betriebe aus dem Elektro-, Dachdecker oder Heizungs- und Sanitärhandwerk vor Ort. Auf der zweiten Stufe vertreibt SolarWorld seine Produkte über andere Handelshäuser, die sich seit langem auf Photovoltaik spezialisiert haben. Weiterhin verkauft SolarWorld seine Produkte auch direkt an Privatkunden, während die Geschäftsabwicklung der Aufträge durch den Installateur vor Ort erfolgt.

Unternehmensführung und Aufsichtsgremien

Die Führungsgremien der SolarWorld umfassen den Vorstand, der gegenwärtig aus vier Mitgliedern besteht, und den Aufsichtsrat, der gegenwärtig aus drei Mitgliedern besteht.

Soweit nicht in diesem Prospekt offen gelegt, bestehen bei keinem der Mitglieder des Aufsichtsrats und des Vorstands der SolarWorld irgendwelche potentiellen Interessenkonflikte zwischen ihren Pflichten und Aufgaben für die SolarWorld und ihren privaten Interessen oder sonstigen Verpflichtungen. Die Mitglieder des Vorstands und des Aufsichtsrates können unter der Adresse des Hauptsitzes der SolarWorld kontaktiert werden.

Signifikante Veränderungen/Ausblick

Soweit nicht in diesem Prospekt offen gelegt, hat es seit dem 31. März 2011 weder signifikante Änderungen der Finanz- bzw. Handelsposition der SolarWorld oder des SolarWorld Konzerns gegeben noch hat sich der Geschäftsausblick der SolarWorld oder des SolarWorld Konzerns seit dem 31. Dezember 2010 signifikant negativ verändert.

Gerichts- und Schiedsverfahren

Soweit nicht in diesem Prospekt offen gelegt, gibt es keine behördlichen Verfahren bzw. Gerichts- oder Schiedsverfahren (einschließlich schwebender oder angedrohter Verfahren, von denen die SolarWorld Kenntnis hat), noch hat es derartige Verfahren gegeben, die sich in den zwölf Monaten vor der Veröffentlichung dieses Prospekts auf die Finanzposition von SolarWorld oder des SolarWorld Konzerns signifikant ausgewirkt haben oder noch auswirken könnten.

Zusammenfassung in Bezug auf die Risikofaktoren

Zusammenfassung der Risikofaktoren in Bezug auf die Emittentin

SolarWorld ist die zentrale Holdinggesellschaft des SolarWorld Konzerns. Daher ist SolarWorld denselben Risikofaktoren ausgesetzt, die auch das Geschäft und den Betrieb des SolarWorld Konzerns betreffen.

Das Geschäft des SolarWorld Konzerns und folglich auch der Wert der Schuldverschreibungen unterliegen einer Reihe von Risiken. Nachfolgend werden einige Risiken beschrieben, die SolarWorld's Finanzposition und Betriebsergebnisse wesentlich nachteilig beeinflussen können.

- Die wirtschaftlichen Bedingungen sind durch erschwerte Finanzierungsbedingungen infolge der Finanzkrise stark beeinträchtigt. Auch wenn die wirtschaftliche Lage stabiler geworden ist, sieht der Internationale Währungsfonds die stark gestiegene Staatsverschuldung als eine Gefahr, die sich negativ auf den fragilen Bankensektor auswirken könnte¹. Kurzfristig könnte es Kreditengpässe für große Investitionsvorhaben geben. Auch wenn Großprojekte nur einen kleinen Anteil des SolarWorld Konzern's Geschäft darstellen, könnte ein Rückgang der

¹ (Quelle: Projektgruppe Gemeinschaftsdiagnose, April 2011)

Nachfrage negative Auswirkungen auf Umsätze und Ergebnis des SolarWorld Konzerns haben. Weiterhin führen sinkende Haushaltsstrompreise zur sinkenden Bereitschaft von Privatkunden, in Solarprodukte zu investieren, was wiederum das Erreichen der Wettbewerbsfähigkeit von Solarenergie verzögert und die Erschließung neuer Märkte verlangsamt, und mittel- bis langfristig Auswirkungen auf das Geschäft des Konzerns haben kann:

- Das Geschäft des SolarWorld Konzerns unterliegt Änderungen von Solarstrom-Fördergesetzen. Eine Reduktion oder Abschaffung von durch solche Gesetze gewährten finanziellen Anreizen in einem oder mehreren Ländern kann zu einem verlangsamten Gesamtmarktwachstum führen. Ein Nachfragerückgang in den Kernmärkten könnte Umsätze, Ergebnis und Liquidität des SolarWorld Konzerns zeitweise beeinträchtigen;
- Der SolarWorld Group Konzern ist einer Intensivierung des Wettbewerbsdrucks ausgesetzt, welcher sich auf allen Stufen der Wertschöpfungskette der Solarindustrie zu verfestigen scheint. Der daraus resultierende mögliche Verlust von Marktanteilen und erhöhte Margendruck aufgrund steigenden Preiswettbewerbs könnte nachteilige Auswirkungen auf Umsätze und Ergebnis des SolarWorld Konzerns haben;
- Bei derzeitigen Siliziumpreisen weisen nur wenige Hersteller alternativer Solarstromtechnologien Kostenvorteile gegenüber den kristallinen Produzenten auf und können bereits im industriellen Maßstab produzieren. Außerdem könnten künftige Regulierungsmaßnahmen, Entsorgungsrisiken sowie die Endlichkeit der eingesetzten Ausgangsstoffe wie Cadmium, Tellur und Indium den Markt für diese Technologien begrenzen. Der mögliche Verlust von Marktanteilen an Wettbewerber und erhöhter Margendruck könnten jedoch nachteilige Auswirkungen auf Umsätze und Ergebnis des SolarWorld Konzerns haben;
- Die Herstellung der Produkte des SolarWorld Konzerns erfordert beträchtliche Mengen an Silizium und anderen Rohmaterialien (Silber, Kupfer, Aluminium, etc.). Gleichbleibende oder steigende Beschaffungskosten könnten bei fallenden Wafer- oder Modulpreisen eine Margenreduktion verursachen und somit einen negativen Einfluss auf das Ergebnis haben. Engpässe bei der Lieferung von Bausatzkomponenten sowie Hilfs- und Betriebsstoffen können die Kostenstruktur beeinträchtigen und Produktionsprozesse verlangsamen und dadurch das Ergebnis des SolarWorld Konzerns reduzieren;
- Der SolarWorld Konzern unterliegt insoweit Kreditrisiken als Geschäftspartner nicht in der Lage sein könnten, ihre vertraglichen Verpflichtungen zu erfüllen. Das Insolvenzrisiko von Kunden zieht zusätzlich Risiken nach sich;
- Die Einführung neuer Produkte bringt konzeptionelle Risiken und Marktrisiken mit sich. Stärkerer Wettbewerbsdruck erhöht das Risiko von Industriespionage;
- Steigender Preisdruck und erhöhtes Angebot könnten zu einer sinkenden Nachfrage nach den Produkten des SolarWorld Konzerns führen. Kunden mit langfristigen Waferverträgen könnten ihren Abnahmeverpflichtungen nicht nachkommen oder Nachverhandlungen verlangen;
- Der SolarWorld Konzern ist von der Einstellung und Bindung hoch qualifizierter Manager und technischer Mitarbeiter abhängig;
- Der SolarWorld Konzern ist Risiken, die mit seinen konzernweit aufgesetzten Prozessen verknüpft sind, ausgesetzt. Diese Prozesse sind in einem großen Umfang durch Informationstechnologie gestützt, was ebenfalls Risiken birgt;
- Der SolarWorld Konzern ist Liquiditätsrisiken, Fremdwährungsrisiken und Zinsrisiken ausgesetzt. Rechtsrisiken können sich realisieren. Bereits eingeführte Produkte bergen Qualitätsrisiken. Steuernachforderungen könnten aufgrund anderer Rechtsauffassungen der jeweiligen Steuerbehörde geltend gemacht werden;
- Der SolarWorld Konzern unterliegt ökologischen Risiken und dem Risiko des Konflikts mit Interessengruppen;

Zusammenfassung der Risikofaktoren in Bezug auf die Schuldverschreibungen

Eine Anlage in die Schuldverschreibungen ist mit bestimmten Risiken im Zusammenhang mit den Merkmalen der Schuldverschreibungen verbunden. Diese Risiken könnten zu erheblichen Verlusten führen, die die Gläubiger zu tragen hätten, wenn sie ihre Schuldverschreibungen verkaufen oder wenn Verluste im Zusammenhang mit der Zahlung von Zinsen oder der Rückzahlung entstehen. Zu diesen Risiken gehört, dass:

- die Schuldverschreibungen nicht für alle Anleger geeignet sind;
- vor der Börsennotierung der Schuldverschreibungen für diese kein Markt existierte und keine Gewissheit besteht, dass ein liquider Sekundärmarkt für die Schuldverschreibungen entstehen wird, oder, sofern er entsteht, fortbestehen wird; in einem illiquiden Markt könnte es sein, dass ein Anleger seine Schuldverschreibungen nicht jederzeit zu angemessenen Marktpreisen veräußern kann;
- der Kurs der Schuldverschreibungen auf Grund von Veränderungen des Zinsniveaus fällt;
- der Marktwert der Schuldverschreibungen fallen kann, wenn sich die Kreditwürdigkeit oder die Aktionärsstruktur von SolarWorld ändert oder als Folge von Änderungen der auf SolarWorld anwendbaren IFRS bzw. HGB Standards;
- die Schuldverschreibungen vorzeitig zum Gesamtnennbetrag zurückgezahlt werden können, falls die Emittentin zur Zahlung von Quellensteuern auf die Zahlung von Kapital oder Zinsen der Schuldverschreibungen verpflichtet ist; wenn die Emittentin die Schuldverschreibungen kündigt und zurückzahlt, kann es sein, dass die Gläubiger den aus der Rückzahlung vereinbahrten Betrag lediglich in Wertpapiere mit niedrigerer Rendite re-investieren können;
- die Schuldverschreibungen Mehrheitsbeschlüsse der Gläubiger im Rahmen einer Gläubigerversammlung vorsehen, so dass ein Gläubiger dem Risiko ausgesetzt ist, durch einen Mehrheitsbeschluss der Gläubiger überstimmt zu werden. Da ein solcher Mehrheitsbeschluss für alle Gläubiger verbindlich ist, können bestimmte Rechte des Gläubigers gegen die Emittentin aus den Anleihebedingungen geändert, eingeschränkt oder sogar aufgehoben werden;
- die Schuldverschreibungen die Bestellung eines Gemeinsamen Vertreters vorsehen, so dass möglicherweise das persönliche Recht eines Gläubigers zur Geltendmachung und Durchsetzung seiner Rechte aus den Anleihebedingungen gegenüber der Emittentin auf den Gemeinsamen Vertreter übergeht, der sodann allein verantwortlich ist, die Rechte sämtlicher Gläubiger geltend zu machen und durchzusetzen;
- die auf Euro lautenden Schuldverschreibungen für solche Anleger ein Währungsrisiko bedeuten können, für die der Euro eine Fremdwährung bedeutet; ferner könnten Regierungen und zuständige Behörden künftig Devisenkontrollen einführen; und
- die Höhe der Schulden, die die Emittentin in Zukunft eingehen kann, nicht begrenzt ist.

Der Eintritt eines oder mehrerer der vorgenannten Risiken kann die Fähigkeit der Emittentin beeinträchtigen, ihren aus den Schuldverschreibungen resultierenden Zahlungsverpflichtungen nachzukommen und/oder zu einem Wertverlust der Schuldverschreibungen führen, je nach Sachlage.

RISK FACTORS

Potential investors should carefully read and consider the risk factors described below and the other information contained in this Prospectus and consult with their own professional advisers (including their financial, accounting, legal and tax advisers) if they consider it necessary before they make a decision about acquiring the Notes. The realisation of one or more of these risks could individually or together with other circumstances adversely affect the business activities and have material adverse effects on the financial condition and results of operations of SolarWorld or the SolarWorld Group. The market price of the Notes could decline as the result of any of these risks, and investors could lose all or part of their investments. The risks described below may not be the only risks to which SolarWorld or the SolarWorld Group is exposed. Additional risks which are presently not known to SolarWorld or the SolarWorld Group or which currently are considered immaterial could also adversely affect the business operations of SolarWorld or the SolarWorld Group and have material adverse effects on SolarWorld Group's business activities, financial condition and results of operations. The sequence in which the risk factors are presented below is not indicative of their likelihood of occurrence, the scope of their financial consequences or the importance of the risk factors mentioned below. In addition, investors should be aware that the risks described might combine and thus intensify one another.

Risks relating to the Issuer

Risk Factors regarding SolarWorld Aktiengesellschaft and SolarWorld Group

SolarWorld is the central holding company of the SolarWorld Group. Accordingly, SolarWorld is affected by the same risk factors as those that affect the business and operations of the SolarWorld Group.

SolarWorld Group's business and as a result, the value of the Notes, are exposed to a number of risks. The following contains a description of certain risks, which may materially adversely affect SolarWorld Group's financial position, cash flow and earnings.

While all the risks considered material are described below, these are not the only risks SolarWorld Group faces. Additional risks not known to SolarWorld Group or not presently considered material might also impair SolarWorld Group's business operations.

Macroeconomic Risks

Economic conditions have been strongly impacted by tighter financing terms and conditions as a result of the financial crisis. Although the economic situation has stabilised, the International Monetary Fund still identifies high public debt, which might adversely affect the fragile banking sector, as a potential risk¹. In the short term, there might be credit bottlenecks regarding large-scale investment projects. Large scale projects only constitute a small portion (9%) of the sales of SolarWorld Group. Nevertheless, it is an important market area in times when other markets experience a slowdown. A decline in these investments might therefore have a negative effect on the company's business.

Furthermore, falling electricity prices for private households lead to falling propensity among retail customers to invest in solar products, which in turn delays in solar power reaching grid parity and slows down the entering of new markets. Over the medium term, household power prices will impact on SolarWorld business since end customers may choose between self-produced solar power and power from a utility company, i.e. the electricity generation costs of a solar power system are compared with household power prices. A decline in demand by end customers might have a medium effect on SolarWorld Group's revenues and earnings.

Political and Regulatory Risks

SolarWorld Group's business is subject to changes in laws and regulations whose objective is the promotion of solar power. A reduction in, or even abolition of, financial incentives, like minimum price systems (feed-in tariffs), investment grants, tax reliefs and quota systems fixing a certain percentage of solar power in the energy mix of energy providers, resulting from such laws and regulations in one

¹ (Source: Projektgruppe Gemeinschaftsdiagnose, April 2011)

or several relevant countries may lead to a slower overall market growth. In several sales markets such as Germany, Italy, and France, the regulatory framework has been increasingly debated and declines in feed-in tariffs will take effect in mid-2011 and 2012. Declines in demand due to changes in the regulatory framework in individual regions may temporarily impact SolarWorld Group's revenue, earnings and cash situation. As long as grid parity has not been achieved in individual markets, SolarWorld Group will be exposed to this risk.

Risks from Intensified Competition

SolarWorld Group is exposed to an intensification of competitive pressure, which tends to harden at all stages of the value creation chain of the solar industry. Reasons for growing competition consist above all of low-wage countries and declining annual feed-in tariffs. With increasing production capacities in the wafer, cells and module markets, supply for these products may exceed demand thus accelerating the price decline in these segments. The fight for market shares and ongoing expansion of supply will result in price reductions in the wafer and module segments. The therefrom resulting potential loss of market shares and stronger margin pressure due to increased price competition may have adverse effects on sales and earnings of SolarWorld Group.

Risks from Alternative Technologies

Due to current silicon price levels, only few manufacturers of alternative solar power technologies have in fact cost benefits versus crystalline manufacturers. This applies above all to the rooftop systems market. In addition, only a few alternative manufacturers are already able to produce on an industrial scale. Moreover, the market for these technologies might also be adversely affected by future regulatory measures, disposal risks, and the finite nature of the raw materials used such as cadmium, tellurium and indium. Successful competitors might reduce the market share of SolarWorld Group, increase price competition, and thus place stronger pressure on margins. This might adversely affect the revenues and earnings of SolarWorld Group.

Procurement Risks

The manufacture of SolarWorld Group's products requires substantial amounts of silicon and other raw materials (silver, copper, aluminum, etc.). With a rise in silicon supplies, the risk of market prices falling below the level agreed under long-term contracts increases. The positive macro-economic growth can lead to an increase in raw material prices due to rising production across all branches. Unchanged or rising procurement costs might cause margin erosion and thus adversely impact earnings if wafer and module prices should fall.

Supply bottlenecks can concern kit components and consumables. The solar industry is a young sector so that market growth may lead to supply bottlenecks at suppliers of industry-specific consumables and kit components. Bottlenecks in supplies of kit components and consumables may adversely affect the cost structure, slow down production processes and thus reduce the earnings of SolarWorld Group.

Corporate Strategy Risks

SolarWorld Group's operating results depend on the development of commercially viable new products and production technologies. Misjudgments concerning future developments can lead to wrong investment and technology decisions as well as lack of market acceptance for newly developed products. Losses of market shares, image, and capital due to incorrect strategic decisions might erode SolarWorld group's economic position. Lack of acceptance of new products might impact on the revenues and earnings of SolarWorld Group. Apart from that, stronger competitive pressure increases the risk of industrial espionage. SolarWorld Group is an attractive target for competitors with increasing market success and the loss of intellectual property might reduce its pioneering role.

Counterparty Default Risks

SolarWorld Group is subject to credit risks to the extent that counterparties to transactions may not be able to perform their contractual obligations. Moreover, since SolarWorld Group's major customers are small to medium sized companies it may face the risk of falling demand due to illiquid customers as a result of which products may not be sold. Due to rising consolidation tendencies in the market, the insolvency risk concerning wafer and trading customers is increasing. Although the additional pressure

on companies due to the financial crisis has eased, there is still a risk to lose the receivables outstanding for SolarWorld Group. Contractual defaults and non-performance of payment obligations might have a negative impact on earnings.

Sales and Price Risks

Growing internationalisation, the resulting intensification of competition and changes in the legal framework might create cost pressure in the core markets (e.g. Germany, Italy). This may cause shifts in demand as customers base their purchasing decisions primarily on a return on their investment. Furthermore, as market prices have fallen and wafer supplies have risen, it is to be assumed that not all wafer customers will meet their contractual purchasing obligations or demand renegotiations. Sales and contractual defaults might adversely affect the earnings and order book of SolarWorld Group and result in inventories building up.

Human Resources Risks

Competition for highly qualified management and technical personnel is intense in the industries in which SolarWorld Group operates. SolarWorld Group's future success depends in part on its continued ability to hire, integrate and retain highly skilled employees. The availability of highly qualified technical and executive staff in the labor market is declining, while competition for talent is growing. Additionally, the company will face demographic challenges in future. The risks include potential erosion of the technological edge and slowdown in corporate growth due to a shortage of skilled technical staff, which might adversely affect revenues and earnings.

Information Technology Risks

SolarWorld Group is dependent upon technology for the distribution of information within the SolarWorld Group and to customers and suppliers. This information technology is subject to risks associated with defects, errors, failures and computer viruses. The IT systems undergo regular maintenance and the safety standards are regularly reviewed and improved. Nevertheless, there can be no assurance that SolarWorld Group's information technology systems will not fail and cause material disruptions to SolarWorld Group's business. Productivity losses due to resulting interruption of production and workflows may have a negative impact on SolarWorld Group's sales and earnings.

Liquidity Risks

SolarWorld's ability to finance its business depends - apart from its own business success - on future developments of financial markets. Should the situation in the credit markets worsen over the long term, the company would have to accept a widening of spreads in future financing measures. Tougher lending commitments would have a negative impact on the funding options concerning the expansion plans. Apart from this, there is the risk that borrowed funds might be terminated in case SolarWorld fails to comply with financial covenants. This would lead to premature refinancing needs with potentially less favorable terms and conditions.

Other Financial Risks

SolarWorld Group conducts a significant portion of its operations outside of Europe and is therefore exposed to risks associated with the fluctuations of foreign currencies. Furthermore, SolarWorld Group is subject to interest rate risks and price risks in the ordinary course of its business. Any loss resulting from the realisation of any of these risks may adversely affect SolarWorld Group's earnings.

Legal Risks

SolarWorld Group is subject to a wide range of tax, competition, patent, anti-trust, copyright, and environmental regulations within the scope of the international business operations, infringement of which may cause costs. Litigation might impact on the result of the business operations since it would tie up financial resources, jeopardise the company's reputation and brand, and cause losses of tangible and intangible corporate property. To date, legal risks only resulted in moderate costs for SolarWorld Group. However, SolarWorld Group cannot predict how the legal risk may develop in the future and can therefore not exclude that any pending or future proceedings might have an adverse effect on the group's earnings or financial position.

Warranty and Other Liability Risks

Substandard quality may result in manufacturer's guarantee, statutory warranty and *ex gratia* repair costs and lead in the long term to the loss of market share or lower product margins. In extreme cases, product liability and compensation claims may be made.

Sales to wholesalers are customarily conducted on the basis of SolarWorld Group's general terms and conditions. The same provide for a customary limitation of warranty rights for the customer. In general, SolarWorld is entitled to remedy defects by repair or re-delivery. Only if such measurements should fail the customers may claim a deduction of the purchase price and/or withdraw from the purchase and claim damages. In the case where SolarWorld Group sells modules to larger turn key projects, the terms of warranty and liability are agreed upon on an individual basis and may differ from the above. In addition to the foregoing, since 1 January 2010 the modules being sold are covered by a service certificate providing a linear performance warranty for a period of 25 years for a power output decrease compared to the nominal output of the module of maximal 0.7% *per annum* starting from 97% at the second year of use. Accordingly, SolarWorld warrants a power output of at least 80.2% at the end of the warranty period compared to the nominal power output of the module, provided that the modules have been used and maintained with the due diligence (*erforderliche Sorgfalt*). In the case where the power output falls below the above stated figure, SolarWorld Group may remedy the shortfall by providing modules in exchange or a compensation for the time-value of the respective module or other appropriate measurements. To date, SolarWorld Group has only had moderate costs for warranty claims. However, SolarWorld Group cannot predict how this will develop in the future and can therefore not exclude that any pending or future warranty claims might have an adverse effect on the group's earnings or financial position.

Litigation Risks

SolarWorld Group is involved in legal, regulatory, governmental and arbitration proceedings and may become involved in additional proceedings. These proceedings involve claims by and against SolarWorld Group, which arise in the ordinary course of its business (such as payment claims against customers who do not comply with their contractual obligations), trademark, patent and warranty proceedings. To date, these proceedings only resulted in moderate costs for SolarWorld Group. However, SolarWorld Group cannot predict how the litigation risk may develop in the future and can therefore not exclude that any pending or future proceedings might have an adverse effect on the group's earnings or financial position.

Taxation Risks

SolarWorld Group aims to comply with all applicable tax laws and regulations concerning the group's sites globally. However, any financial obligation of SolarWorld Group with respect to taxes is subject to changes of the respective laws and regulations as well as business decisions. SolarWorld Group believes that the tax filings are prepared in compliance with all relevant tax laws and regulations. If the relevant tax authority had a different legal position to particular issues this could lead to additional tax claims which could have a negative effect on SolarWorld Group's earnings or financial position.

Environmental and Other Risks

As a manufacturing and selling group, SolarWorld Group is subject to environmental risks. SolarWorld Group operates a group-wide environmental management system in order to counter risks in the process chain and make environmental standards transparent. The gathering of statistics relating to waste, emissions, waste water and the use of material facilitates the early detection and risk identification with regard to environmental issues. However, there remains the general risk of non compliance with environmental protection law which may lead to fines and/or compensation payments which in turn may have negative effects on SolarWorld Group's earnings or financial position.

Furthermore, there are many stakeholders with many different needs. Conflicts with stakeholders can arise e.g. because of inconveniences caused by noise and light radiation for residents living in direct vicinity of all production sites. However, SolarWorld Group facilitates a direct exchange with stakeholders and thus aims to reduce the probability. Should any serious conflicts with stakeholders arise, this might impact on SolarWorld Group (via damage to the image and follow-up costs) over the very long term.

Risks relating to the Notes

An investment in the Notes involves certain risks associated with the characteristics, specification and type of the Notes which could lead to substantial losses that Holders would have to bear in the case of selling their Notes or with regard to receiving interest payments and repayment of principal. Risks regarding the Notes comprise, *inter alia*, the following risks:

Notes may not be a suitable investment for all investors

Each potential investor in Notes must determine the suitability of that investment in light of its own circumstances. In particular, each potential investor should:

- (i) have sufficient knowledge and experience to make a meaningful evaluation of the relevant Notes, the merits and risks of investing in the relevant Notes and the information contained or incorporated by reference in this Prospectus;
- (ii) have access to, and knowledge of, appropriate analytical tools to evaluate, in the context of its particular financial situation and the investment(s) it is considering, an investment in the Notes and the impact the Notes will have on its overall investment portfolio;
- (iii) have sufficient financial resources and liquidity to bear all of the risks of an investment in the Notes or where the currency for principal or interest payments is different from the potential investor's currency;
- (iv) understand thoroughly the terms of the Notes; and
- (v) be able to evaluate (either alone or with the help of a financial adviser) possible scenarios for economic, interest rate and other factors that may affect its investment and its ability to bear the applicable risks.

Liquidity Risk

Application has been made to the Luxembourg Stock Exchange for the Notes to be admitted to trading on the Luxembourg Stock Exchange's regulated market and to be listed on the official list of the Luxembourg Stock Exchange. However, there is a risk that no liquid secondary market for the Notes will develop or, if it does develop, that it will not continue. The fact that the Notes may be listed does not necessarily lead to greater liquidity as compared to unlisted Notes. In an illiquid market, an investor is subject to the risk that he will not be able to sell his Notes at any time at fair market prices. The possibility to sell the Notes might additionally be restricted by country specific reasons.

Risk of Early Redemption

The Notes may be redeemed at the option of the Issuer (in whole, but not in part) at the principal amount of the Notes plus accrued interest to the date fixed for redemption, for reasons of taxation, as more fully described in the Conditions of Issue. In the event that the Issuer exercises the option to redeem the Notes, the Holders might suffer a lower than expected yield and might not be able to reinvest the funds on the same terms.

Market Price Risk

The development of market prices of the Notes depends on various factors, such as changes of market interest rate levels, the policies of central banks, overall economic developments, inflation rates or the lack of or excess demand for the Note. The Holders are therefore exposed to the risk of an unfavourable development of market prices of their Notes which materialise if the Holders sell the Notes prior to the final maturity. If a Holder decides to hold the Notes until final maturity, the Notes will be redeemed at the amount set out in the Conditions of Issue.

The market value of the Notes could decrease if the creditworthiness of SolarWorld Group worsens or the shareholder structure changes

If, e.g., because of the materialisation of any of the risks regarding the Issuer, the likelihood that the Issuer will be in a position to fully perform all obligations under the Notes when they fall due decreases, the market value of the Notes will suffer. In addition, even if the likelihood that the Issuer will be in position to fully perform all obligations under the Notes when they fall due actually has not

decreased, market participants could nevertheless have a different perception. In addition, the market participants' estimation of the creditworthiness of corporate debtors in general or debtors operating in the same business as SolarWorld Group could adversely change.

If any of these risks occurs, third parties would only be willing to purchase Notes for a lower price than before the materialisation of said risk. Under these circumstances, the market value of the Notes will decrease.

Currency Risk

The Notes are denominated in euro. If such currency represents a foreign currency to a Holder, such Holder is particularly exposed to the risk of changes in currency exchange rates which may affect the yield of such Notes. Changes in currency exchange rates result from various factors such as macroeconomic factors, speculative transactions and interventions by central banks and governments.

In addition, government and monetary authorities may impose (as some have done in the past) exchange controls that could adversely affect an applicable currency exchange rate. As a result, investors may receive less interest or principal than expected, or no interest or principal.

Fixed Rate Notes

The Notes bear a fixed interest rate. A Holder of fixed rate Notes is particularly exposed to the risk that the price of such Notes falls as a result of changes in the market interest rate. While the nominal interest rate of a fixed rate Note as specified in the Conditions of Issue is fixed during the life of the Notes, the current interest rate on the capital market typically changes on a daily basis. As the market interest rate changes, the price of fixed rate Notes also changes, but in the opposite direction. If the market interest rate increases, the price of fixed rate Notes typically falls, until the yield of such Notes is approximately equal to the market interest rate of comparable issues. If the market interest rate falls, the price of fixed rate Notes typically increases, until the yield of such Notes is approximately equal to the market interest rate of comparable issues. If a Holder of the Notes holds his Notes until maturity, changes in the market interest rate are without relevance to such Holder as the Notes will be redeemed at the principal amount of the Notes.

Resolutions of Holders

Since the Notes provide for meetings of Holders, a Holder is subject to the risk of being outvoted by a majority resolution of the Holders. As such majority resolution is binding on all Holders, certain rights of such Holder against the Issuer under the Conditions of Issue may be amended or reduced or even cancelled.

Holders' Representative

Since the Notes provide for the appointment of a Holders' Representative by a majority resolution of the Holders, it is possible that a Holder may be deprived of its individual right to pursue and enforce its rights under the Terms and Conditions against the Issuer, such right passing to the Holders' Representative who is then exclusively responsible to claim and enforce the rights of all the Holders.

Changes in Accounting Standards (IFRS and HGB (German Commercial Code))

SolarWorld's annual financial statements are issued in accordance with IFRS Standards as adopted by the EU, and the additional requirements of German commercial law pursuant to section 315a (1) HGB (*Handelsgesetzbuch*, German Commercial Code). New or changed accounting standards may lead to adjustments in the relevant SolarWorld accounting positions. This might lead to a different perception of the market regarding SolarWorld's creditworthiness. As a result there is a risk that the market value of the Notes might decrease.

No restriction on the amount of debt which the Issuer may incur in the future

There is no restriction on the amount of debt which the Issuer may issue which ranks equal to the Notes. Such issuance of further debt may reduce the amount recoverable by the Holders upon winding-up or insolvency of the Issuer.

USE OF PROCEEDS

In connection with the offering of the Notes, the Issuer will receive net proceeds of approximately EUR •, after deducting aggregate costs and commissions aggregating approximately EUR •. The Issuer intends to use the net proceeds for purposes of its general business.

SOLARWORLD AKTIENGESELLSCHAFT

General Information about SolarWorld Aktiengesellschaft and SolarWorld Group

SolarWorld Aktiengesellschaft ("SolarWorld", and together with its subsidiaries and affiliates the "SolarWorld Group") is the parent company of SolarWorld Group performing the function of a holding company. SolarWorld is listed in the prime standard of Frankfurt Stock Exchange (TecDAX).

SolarWorld Group is one of the world leaders in the manufacture of crystalline solar power technology. Today, SolarWorld Aktiengesellschaft and its subsidiaries research, develop, produce and recycle at all stages of the solar value creation chain: from the generation of silicon via wafer, cell and module production all the way to systems solutions in on-grid and off-grid technology. The business model concentrates on the core business of solar power technology. SolarWorld Group emphasises on solar power applications ranging from roofs to large-scale solar power plants in the worldwide solar markets. At the same time, SolarWorld Group also promotes access to energy in regions all over the world that are far removed from grids.

History, Incorporation and Seat

The origins of SolarWorld trace back to the sole proprietorship (*Einzelfirma*) Frank H. Asbeck, Ingenieurbüro für Industrieanlagen founded 1988 and registered with the commercial register (*Handelsregister*) of the local court (*Amtsgericht*) Bonn under HRA 3761. As a result of the expansion of its business activities, SolarWorld Aktiengesellschaft was founded to which the whole business unit photovoltaic trading and plant construction was transferred. As a stock corporation under German law SolarWorld Aktiengesellschaft was registered with the commercial register (*Handelsregister*) of the local court (*Amtsgericht*) Bonn under HRB 8319 on 26 March 1999. SolarWorld's headquarters is located in Bonn, Germany; the registered office is located in Martin-Luther-King-Straße 24, 53175 Bonn, Germany, telephone number: +49 (0) 228 559 20 0.

The fiscal year of SolarWorld is the calendar year.

Corporate Purpose

Article 2 of SolarWorld's Articles of Association (*Satzung*) define the company's purpose as:

1. The corporate purpose of the company comprises plant engineering and construction, product development, manufacturing of modules and components as well as trading in these products in the photovoltaic business, the planning/design, construction and operation of, and the trading with, wind power plants, as well as power trading.
2. The company is authorised to engage in any business and to take measures which serve this corporate purpose. To this end, it may also establish, acquire or invest in other companies.

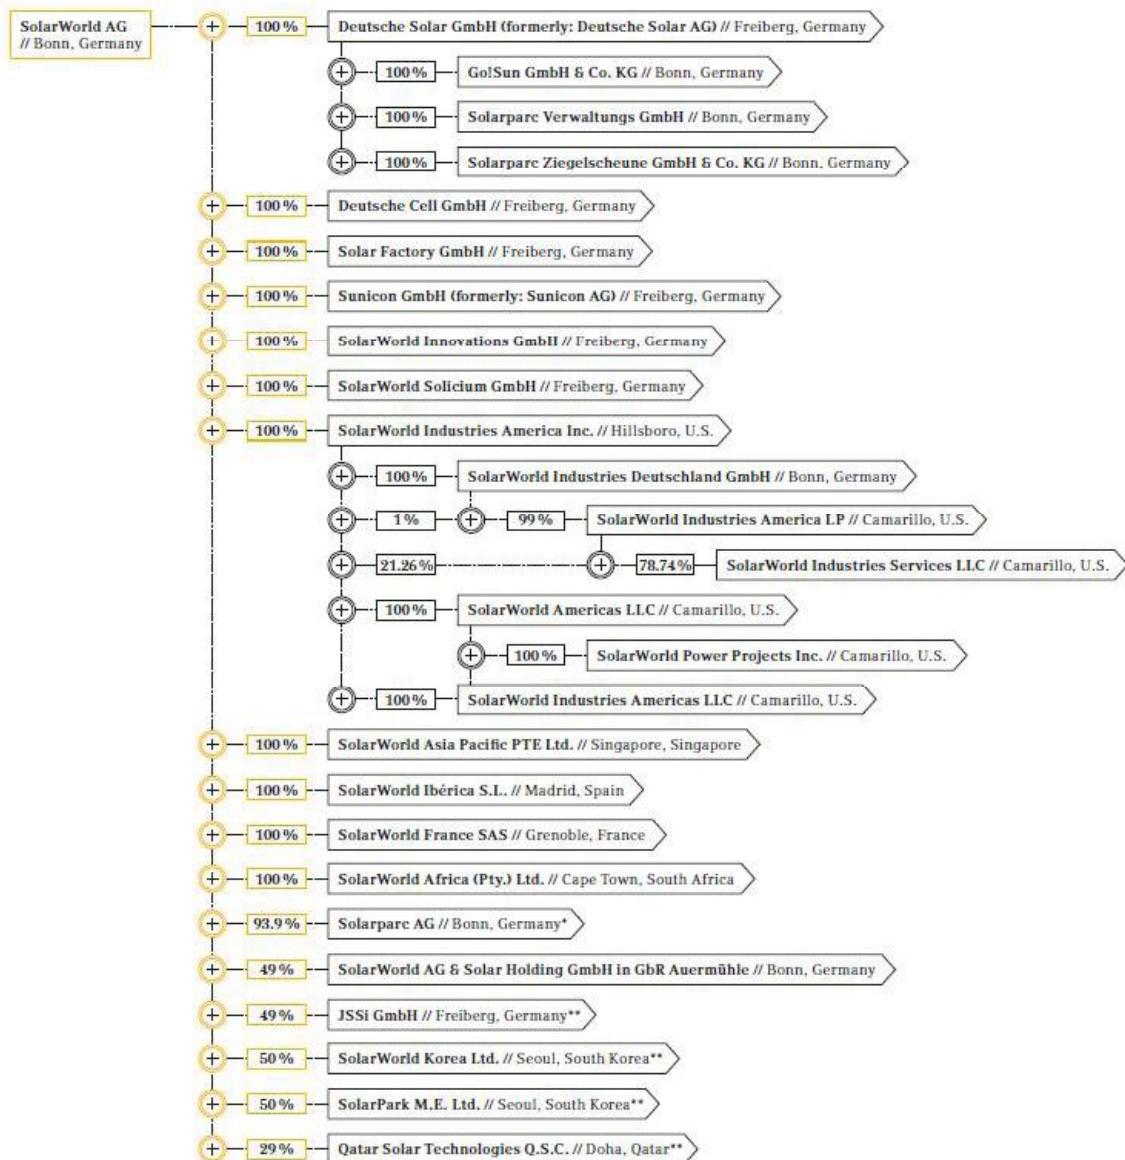

Organisational Structure and Group Strategy

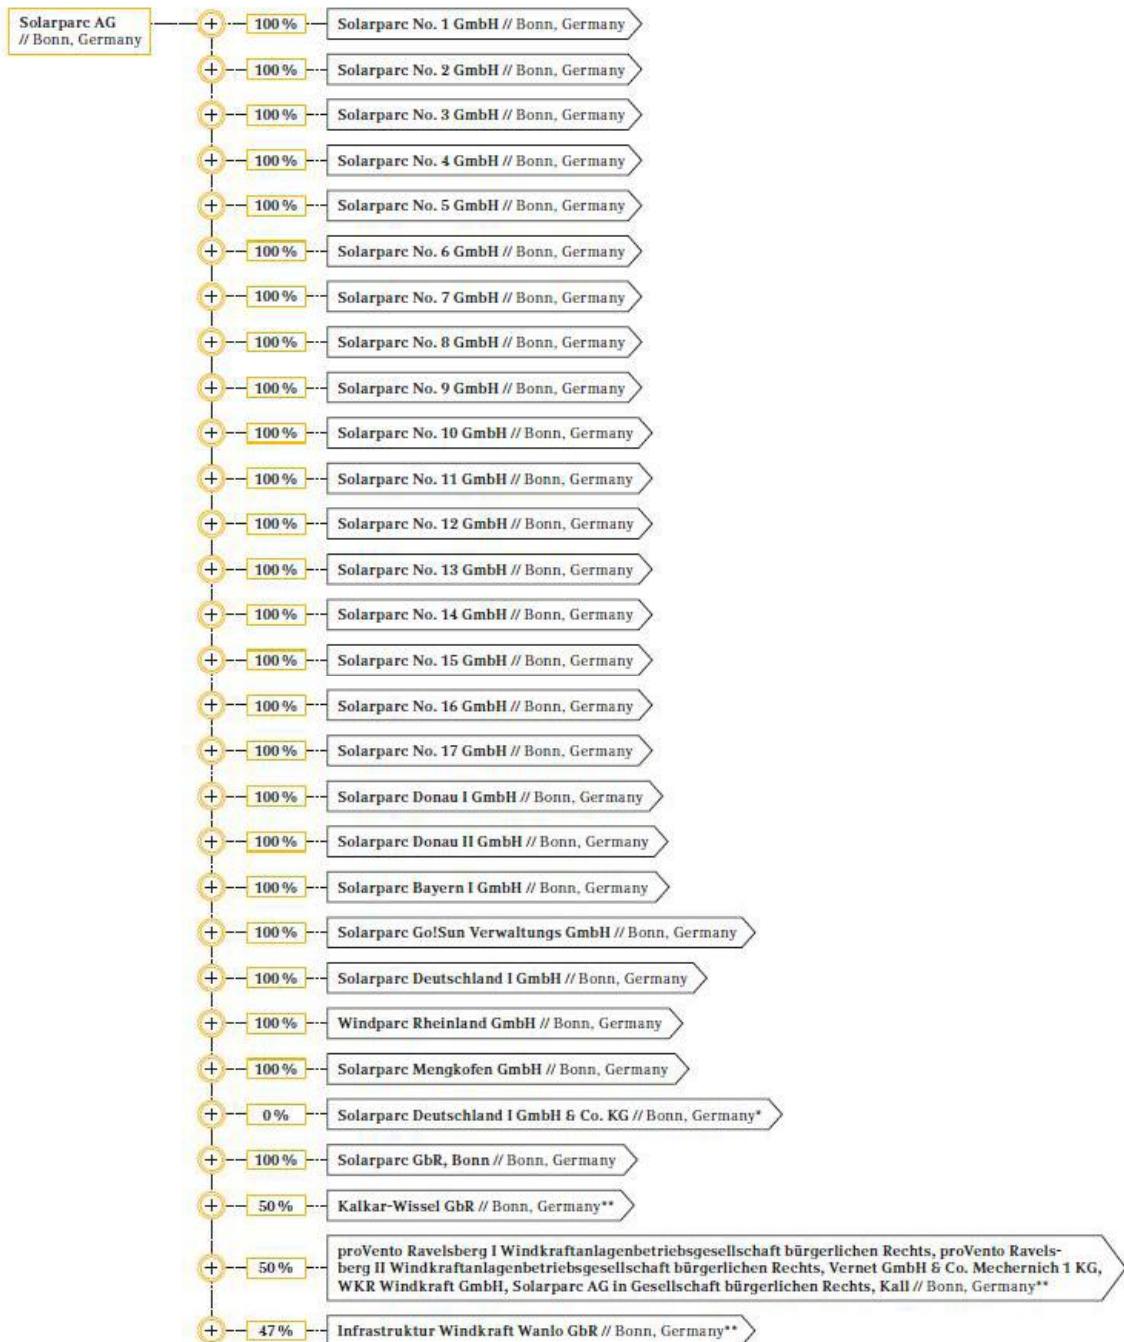

Organisational Structure

SolarWorld Group is headed by SolarWorld, which as the holding company provides centralised business services to the group, such as leadership, steering and control functions in the areas of strategic group development, mergers & acquisition, finance, controlling, corporate communication, marketing as well as sustainability management as a staff position under the group management board.

At the date of this Prospectus, the SolarWorld Group consists of a total of 56 companies. SolarWorld entered into profit and loss transfer agreements with all major wholly owned subsidiaries in Germany.

Group Strategy

As fully integrated solar technology group, it is SolarWorld Group's goal to expand its position on the global solar market and, as a result, to further promote the use of solar energy. At the same time SolarWorld Group remains open to creative approaches in overlapping business sectors.

SolarWorld Group focuses on the optimisation of its cost structures through research and development activities across the entire production chain. It also plans to increase its production capacities worldwide in order to satisfy growing demand for solar power products and benefit from economies of scale, thus achieving a stable growth. It has the goal to increase its market share and to focus on the core markets of Europe, the USA as well as the development and penetration of new market segments like off-grid solar power systems. For this reason it has established sales offices in the major solar markets worldwide and it is developing international marketing campaigns to raise brand awareness as a high quality manufacturer of solar power products. As differentiation strategy, SolarWorld Group is further developing its competence in integrated ready-to-assemble solar systems (solar kits) and its service quality, since the market for integrated system solutions offers higher margins and is more difficult to penetrate by competitors who are not present on the spot.

SolarWorld Group also aims to strengthen its presence in the market of large solar power plants for on-grid as well as off-grid power supply. The increasing concerns regarding energy security and the growing demand for low-carbon energy technologies have created new opportunities for large solar power systems, which the company wants to use for its further growth. With the acquisition of Solarparc AG, a company specialised in planning, constructing, operating and selling renewable energy power plants, combined with its U.S. subsidiary SolarWorld Power Projects Inc., which supports SolarWorld Group's activities in the free-field solar power segment in the U.S., SolarWorld is now positioned in the market of large solar power plants.

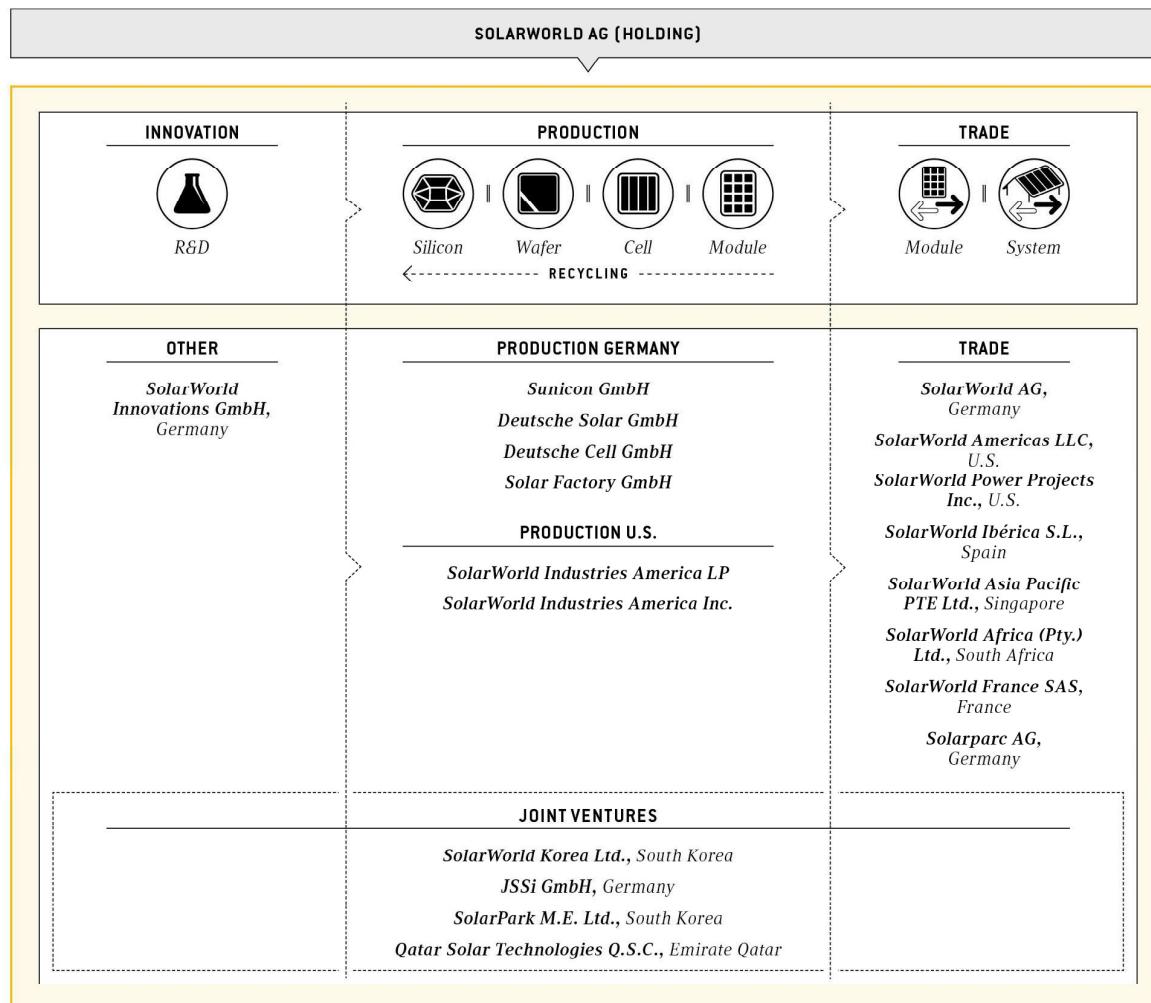

Business Overview – Principal Activities and Principal Markets

General

SolarWorld Group is one of the world leaders in the manufacture of crystalline solar power technology, whose integrated value creation chain ranges from raw material to the turn-key solar plant. Thus, it concentrates on the core business of solar power technology and operates in four operating segments that take global business activities as well as the SolarWorld Group organisation into account: "Production Germany", "Production U.S.", "Trade" and "Other", which reflect the strategic orientation as well as the predominant internal organisation, reporting and control structure of SolarWorld Group.

In the production field, the segments include regionally coherent and fully integrated production activities in Germany as well as in the U.S. (segments "Production Germany" and "Production U.S."). The goal pursued is to tap synergy and efficiency potentials right across the entire value chain and, in doing so, to gain competitive advantages for the end product, *i.e.* "solar module". The operating segment "Trade" ultimately includes the worldwide distribution of solar modules. Wafer sales to external customers have been placed in the "Production Germany" segment. The business segment "Other" combines different business activities of SolarWorld Group whose financial influence is not, not yet, or no longer crucial to the assets, finance and earnings situation of SolarWorld Group.

SEGMENT STRUCTURE AND STAGES OF THE VALUE CHAIN

Additionally, SolarWorld AG acts as the European sales and distribution centre for the trading in modules and kits. In the case of high capacity central solar power stations SolarWorld also provides turn-key installation to customers. A central purchasing unit attached to Deutsche Solar GmbH controls the procurement and purchasing activities for SolarWorld Group globally. Research activities are bundled centrally at the subsidiary SolarWorld Innovations GmbH. In this way SolarWorld Group benefits from group-wide synergies and economies of scale, improves the know-how transfer within SolarWorld Group and strengthens its market position. With a uniform group-wide IT system, SolarWorld Group intends to secure the identical acquisition of data, a smooth exchange of information and the efficient handling of projects for all business segments.

With a total of 11 sites worldwide (including operating sites, joint ventures and the holding company), SolarWorld Group is today present on the internationally relevant solar markets. SolarWorld Group operates with production facilities in Germany, the USA, and South Korea on the core solar markets of Europe, North America, and Asia, which keeps transport distances short and logistics cost low. Sales teams in Germany, Spain, France, the U.S., Singapore, and South Africa are trying to push ahead distribution in the solar growth regions.

In 2010, SolarWorld Group started production in a new wafer factory at its German Freiberg location. The high level of automation of this production helps SolarWorld Group to further cut production costs. At the end of 2010, the second stage expansion with a level of 250 MW (megawatts, "MW") was started. SolarWorld also began with the construction of a third module facility in Germany, Freiberg in

the year 2010. This facility (Solar Factory III) was inaugurated on 20 May 2011. In total, SolarWorld Group plans to have a module nominal capacity of 600 MW by the end of 2011 in Germany.

In 2010, SolarWorld completed its expansion plans in the USA. The integrated production facility from wafer to the finished module in Hillsboro, Oregon, reached its planned nominal capacity of 500 MW by the end of 2010. As a result, SolarWorld Group now can supply the growing demand for solar products in the U.S. market from its local production facilities.

With the take-over of Solarparc AG at the beginning of 2011, SolarWorld expanded its sales channels, strengthening its presence in the large-scale solar power plants segment. The experienced project management company plans, constructs, markets and operates renewable power plants. Through management and operation of the group-owned renewable energy power plants, the generated clean electricity is fed into the power grid in accordance with the German Renewable Energy Sources Act. In addition, Solarparc AG assumes technical and commercial management of renewable energy plants as a service for its customers. Major renewable energy plants are sold to institutional and private investors either individually or bundled as a fund.

Production Germany and Production U.S.

SolarWorld Group's production ranges across the value creation chain from silicon to the finished module. The integrated production leads to process transparency and facilitates process control and optimisation. Thus, SolarWorld can control its products at every manufacturing stage as a result of which it can assure the high quality of the SolarWorld brand to its customers. This holistic production approach allows SolarWorld Group to cut the use of resources under economic and ecological aspects. Furthermore, it provides with additional means for increasing the performance and competitiveness of the products. Through this value creation chain SolarWorld Group seeks to achieve internal cost cutting effects through which the decline in feed-in tariffs for solar power established by the relevant national renewable energy laws shall largely be compensated. The geographical separation of the two segments allows for cross-site comparisons. A short overview of the integrated value chain steps is provided below:

Raw Material Production and Recycling Activities

The first stage of the solar value creation chain is the production of silicon. Silicon is the most important raw material of the photovoltaic industry. Besides long-term silicon contracts, Solarworld Group's own silicon production and recycling activities stabilise the necessary raw material position and costs. Under the coverage of Sunicon GmbH, SolarWorld Group's raw material activities are pooled. Sunicon GmbH is responsible for securing the strategic long-term supply of silicon.

Within the framework of the Joint Venture, JSSI GmbH, Freiberg, Germany ("JSSI") with Evonik Degussa GmbH (SolarWorld: 49%), processes in industrial silicon production are evaluated and developed with regard to their feasibility and economy.

In 2010, JSSI produced 660 tonnes solar-grade silicon under the brand Sunsil®, which SolarWorld used as raw material basis for the subsequent wafer production. Advantage of this joint venture is, on the one hand, the lower investment costs compared to those spent for the process employed so far. On the other hand, Evonik Degussa GmbH provides the input product, mono-silane, and acts as a partner (in the context of the joint venture) in building the precipitation plant for the subsequent production of solar-grade silicon. Furthermore, the process based on the use of mono-silane is energy-efficient because, in comparison with conventional silicon production, it saves up to 90% of the required energy. This newly developed precipitation process is protected by four patents. All rights are held exclusively by JSSI, whose general conditions are laid down in a master agreement. Regarding the purchase of the input product, mono-silane, Evonik Degussa GmbH, JSSI and SolarWorld hold a long-term contract until 2020, which secures the basis for silicon production.

Due to its broad range of recycling activities, which range from by-products of solar and semiconductor production and processing via wafer and cell scrap all the way to the recycling of all commercially available solar modules, SolarWorld Group is one of the market leaders worldwide. Production residues from wafer and column manufacture are also completely recycled. Cells and modules made from recycled wafers meet the same quality and performance criteria as modules from non-recycled raw materials. SolarWorld Group succeeded in increasingly automating the internal recycling processes thus making them more cost-efficient. The recycling contributes about 22% to the raw

materials supply of SolarWorld Group. In 2010, SolarWorld expanded its coarse recycling capacities so that the processing result increased to 1,830 (2009: 1,640) tonnes.

With the creation of the joint venture Qatar Solar Technologies Q.S.C. (SolarWorld (29%), Qatar Foundation (70%) and Qatar Development Bank (1%)), headquartered in the Emirate of Qatar, in March 2010, SolarWorld expects to strengthen its future silicon production activities and further implements its strategy of full integration across the solar value chain. The joint venture's goal is to build a new silicon production facility. The gas-based, low energy prices in Qatar represent a crucial cost advantage for the energy-intensive silicon production. SolarWorld plans to use the first silicon supplies from this joint venture from 2012/2013 and beyond.

Production of Wafers, Cells and Modules

The second stage of the production value creation chain is the wafer manufacturing. In a polycrystalline process the silicon is crystallised in square blocks, cut into columns and sawn into wafers with the help of modern wire sawing technology. In line with market requirements SolarWorld produces mono- and polycrystalline wafers under the Solsix® brand. These wafers possess a high degree of efficiency in the downstream cell production as well as a high degree of mechanical stability. They are produced at the SolarWorld sites in Germany and the USA, and are used in the internal production as well as sold to external customers.

During the cell production process, the wafers are further processed in fully automatic processing plants under clean room conditions into multi- and mono-crystalline solar cells.

In the final step of the value creation chain the solar cells are soldered into cell strings, which are connected into a matrix, laminated, equipped with a patented connecting socket on the rear of the laminate and finally pressed into an aluminium frame, thus creating a solar module. The products of the module manufacturing of SolarWorld are then completely transferred into the segment Trade, where they are sold to external customers.

Segment "Other"

Research and Development

International solar markets are characterised by growing competition, above all from low-wage countries and declining annual feed-in tariffs, but at the same time by double-digit growth rates. As a result, the key innovation task of SolarWorld Group's research and development activities is to continually reduce the cost of solar power by means of improvements in processes and products, strengthening the competitive position of SolarWorld Group. SolarWorld's research and development activities cover the entire value creation chain and are pooled together under the wholly-owned subsidiary SolarWorld Innovations GmbH. SolarWorld Group develops technology based on an understanding of the causes and effects all the way from silicon to the finished system. This results in innovation and cost-cutting potential.

SolarWorld Innovations GmbH, Freiberg was founded in 2007 as a strictly research and development company of the SolarWorld Group. Thus, a group-wide strategic platform for technology and product development was built and the necessary resources were created so that SolarWorld Group is able to deliver synergies, including development and test laboratories, to support quality assurance, a central patent and literature administration system, intellectual property (IP) management, and central project management that also serves to coordinate state-funded development projects. Employees from the individual production areas and SolarWorld Innovations GmbH cooperate closely. The research and development is therefore guided by the principle of direct implementation in production, which creates time and efficiency gains for innovations.

SolarWorld Group's research and development activities include two pilot plants that provide an opportunity to carry out development activities under conditions that are very close to actual production conditions. Process and plant development and evaluation will be completed on a pilot scale all the way through to series production at these plants. Furthermore, scientific support by universities, institutes, and other external centres of excellence is and continues to be a key pillar of these development activities, despite the strengthening of the internal research operations.

Trade

Products in the Trade segment include the solar system kits consisting of the selected module type, the inverter to match, the assembly rack required for the roof-shape as well as additional accessories. System Components – almost all developed and produced by SolarWorld and distributed by SolarWorld Group - are e.g. Sunkits®, meaning custom-made construction kits; Sunmodule® plus (photovoltaic modules); the Energyroof®, a complete roof-integrated system; Suntrac®, the ground mounting tracking system; Suntub®, the flat roof assembly system; and Suntrol®, a display panel for the control of a solar system's output, as well as inverters of all types. In the year 2010, SolarWorld introduced new solar products into the market, further differentiating itself from competitors: SolarWorld Sunpac, a complete smart energy solution with battery system that allows the self-consumption of solar power; SunCarport®, a combination of carport and a solar power plant; Sundeck®, a flexibly usable, aesthetic in-roof solar system that replaces roof tiling; and Sunfix® plus, an assembly systems for all conventional inclined roofs which uses less components and bolt-on points. Furthermore, SolarWorld also specialises in the planning and construction of large-scales solar power plants and has increased its know-how through the take-over of Solarparc AG.

Distribution is organised in a three-stage system. The wholesale trade supplies specialised companies on the spot such as electricians, roofer, heating and sanitarian technicians. At the second stage SolarWorld distributes its products through other trading firms that are specialised in photovoltaic for a long time. SolarWorld sells its products also directly to retail customers, whereas the processing of orders will be realised by technical firms on the spot.

The company has sales subsidiaries in Camarillo, USA; Madrid, Spain; Singapore; Cape Town, South Africa as well as in Bonn, Germany. The latter acts as the sales and distribution centre for the European markets. In April 2010 SolarWorld created in Grenoble, France, the fully-owned sales subsidiary "SolarWorld France SAS" and expanded the presence of SolarWorld Group in the French solar market. Goal is to increase sales in this market by strengthening relationships with installers, system integrators and specialised wholesalers. Technical advice and on the spot training also allowed the SolarWorld Group to differentiate its brand name and to better bind French customers to SolarWorld integrated roof-top solutions.

Acquisitions and Divestitures

SolarWorld intends to pursue consistently the strategy of a fully integrated global solar technology group. This is why SolarWorld intends to continue to invest in the core markets of Germany, the USA and South Korea.

The establishment of the central Research and Technology Centre at the Freiberg location was completed as scheduled in 2010.

Furthermore, SolarWorld newly established SolarWorld France SAS, headquartered in Grenoble, France as a wholly owned subsidiary. Its corporate purpose is to distribute SolarWorld products in the French solar market.

In March 2010, SolarWorld founded the Joint Venture Qatar Solar Technologies Q.S.C. and owns 29% of its shares.

In April 2010 SolarWorld acquired 49% of SolarWorld AG & Solar Holding GmbH Auermühle in GbR (formerly Asbeck & Solar Holding GmbH in GbR Auermühle), a company that owns and rents out office buildings with attached storage space. The background of this acquisition is the constantly growing office and storage space requirements of the Bonn sales locations, which are responsible for distribution to the European continent.

On 12 May 2010, the Management Board of SolarWorld decided to make use of the authorisation issued by the Annual General Meeting to acquire treasury stock pursuant to § 71 paragraph 1 No. 8 German Stock Corporation Act (*Aktiengesetz – AktG*) to the volume of 10% of the company's share capital. SolarWorld acquired a total of 4,838,723 shares in the course of 2010. This was the equivalent to 4.33% of SolarWorld shares. On 15 November 2010, SolarWorld AG announced its plans to acquire Solarpark AG. By way of a voluntary public takeover bid, SolarWorld AG offered the shareholders of Solarpark AG to grant one registered share of SolarWorld AG in exchange for each Solarpark AG share making use, *inter alia*, of the repurchased shares. As of 31 December 2010, SolarWorld had already owned 29% of Solarpark AG shares. Thus, as of 31 March 2011, SolarWorld AG was in possession of 93.9% of the shares of Solarpark AG. SolarWorld treasury stock was reduced to 924,607 shares or 0.83% of SolarWorld AG shares.

In 2010, SolarWorld invested a volume of about EUR 216 million in intangible and tangible assets group-wide. A large portion of the investment expenditure was accounted for by the expansion of the two main production sites.

For the most part, group funding is carried out centrally via SolarWorld. This includes, *inter alia*, the management of liquidity as well as borrowing for the funding of the business expansion. SolarWorld's financial policy aims at having respective liquidity reserves available at any time in order to provide SolarWorld Group with the financial flexibility necessary for further international growth of SolarWorld Group, at limiting financial risks, and at optimising capital costs by way of an appropriate capital structure. On 31 March 2011 liquid funds amounted to EUR 464.5 million (31 December 2010: EUR 613.5 million).

SolarWorld aims to achieve a stable equity ratio of or around 40%. In addition to the financial resources requirements that SolarWorld safeguard via the operational cash flow, it also uses different debt financing instruments in accordance with the market situation. The long-term alignment of the financial management seeks to achieve solid funding of SolarWorld Group's expansion plans.

Management and Supervisory Bodies, Board Practices and Corporate Governance

General

In accordance with the maintained two-tier administrative system, SolarWorld has a Management Board (*Vorstand*) and a Supervisory Board (*Aufsichtsrat*). The two boards are separate and no individual is or can be simultaneously a member of both boards. Both governing bodies cooperate by tradition very closely and in a trustful manner at SolarWorld.

The members of the Management Board are appointed, supervised and advised by the Supervisory Board and manage the company under their own responsibility pursuant to the German Stock Corporation Act (*Aktiengesetz – AktG*), to the Articles of Association and to the Rules of Procedure. The Rules of Procedure determine the work of the Management Board and define the responsibilities of individual Management Board members as well as matters reserved for the entire Management Board and the required voting majorities for Management Board resolutions. The Management Board of SolarWorld and the business distribution among its members has remained unchanged in the course of 2011. The Management Board consists of four members.

Pursuant to the German Stock Corporation Act (*Aktiengesetz – AktG*), the Supervisory Board of SolarWorld consists of Supervisory Board members of the shareholders. The Annual General Meeting is not bound by any election proposals. The legal basis for the work of the Supervisory Board at SolarWorld is provided by the German Stock Corporation Act (*Aktiengesetz – AktG*), the Articles of Association and by the Rules of Procedure. The Supervisory Board consists of three members. None of its members exercises a directorship or similar function or performs advisory tasks for important competitors of SolarWorld. At the Annual General Meeting on 21 May 2008, Dr. Claus Recktenwald, Dr. Georg Gansen and also Dr. Alexander von Bossel were re-elected to the Supervisory Board in individual elections for a period of five years each. At its constituent meeting on the same day the Supervisory Board confirmed Dr. Claus Recktenwald as its Chairman, and Dr. Georg Gansen as its Deputy Chairman.

Except as disclosed in this Prospectus, none of the members of the Supervisory Board or the Management Board of SolarWorld has any potential conflicts of interests between any duties regarding SolarWorld and their private interests or other duties. The members of the Supervisory Board and of the Management Board can be contacted at the address of the headquarters of SolarWorld.

Board Practices

In all decisions of fundamental importance to the Issuer the Supervisory Board is involved in a direct and timely manner. The Management Board informs the Supervisory Board both in writing and verbally about all relevant matters of corporate planning and strategic development, about the earnings, asset and finance situation of the Issuer as well as about current business policy and the risk management system being practiced. The reporting duties pursuant to § 90 German Stock Corporation Act (*Aktiengesetz - AktG*) are complied with as much as the recommendations of the German Corporate Governance Code (the "GCGC") dated May 2010.

As far as compliance with the GCGC recommendations by the Supervisory Board of SolarWorld is concerned, the coordination of the strategic alignment of the company and the regular discussion of the current state of strategy implementation are dealt with within the framework of the consistently practiced exchange of information with the Management Board (section 3.2 GCGC). In this process, the provision of information to the Supervisory Board was and is seen as a joint task of the Management Board and the Supervisory Board (section 3.4 GCGC). The Supervisory Board regularly informs and as much as possible integrates the Chairman of the Management Board about/in its activities.

The tasks described by the German Accounting Rules Modernisation Act (*Bilanzrechtsmodernisierungsgesetz - BiMoG*) with regard to accounting and auditing are performed by all three members of the Supervisory Board. To the extent that the BiMoG demands in this context that at least one member of the Supervisory Board be independent and have expertise in the areas of accounting or auditing, the Supervisory Board as a whole declares itself to be sufficiently qualified. In the first instance it is enough if one member of the Supervisory Board has expertise in the area of accounting or alternatively in the area of auditing. This applies to all Supervisory Board members as fully qualified lawyers who have all specialised in business law. In addition, the necessary expertise is simply taken or granted in the case of "*long-standing members in audit committees*". As all the Supervisory Board members have been involved in the annual auditing of the SolarWorld Group since 18 December 1998 no further explanations are needed therefore.

Since the Supervisory Board of SolarWorld is limited to three members a formation of committees is currently legally not required.

German Corporate Governance Rules

Principal source of enacted corporate governance standards for SolarWorld is the German Stock Corporation Act (*Aktiengesetz - AktG*). In addition, the German Corporate Governance Code (the "GCGC"), published by the German Ministry of Justice (*Bundesministerium der Justiz – "BMJ"*) in 2002, as amended, presents essential widely accepted standards for the corporate governance of German listed companies. The aim of the GCGC is to make the German corporate governance rules applicable to listed German stock corporations transparent for national and international investors.

According to section 161 AktG, which entered into force in 2002, the Management Board and the Supervisory Board of a listed German stock corporation are required to declare annually (declaration of compliance) either:

- (i) that the stock corporation has complied and does comply, with the recommendations set forth in the German Corporate Governance Code, or, alternatively,
- (ii) that the stock corporation has not or does not comply with certain recommendations (so-called comply or explain system).

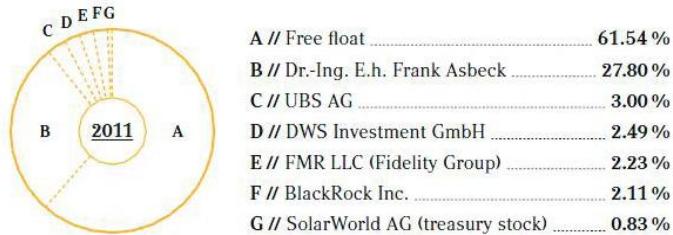

Statement of principles pursuant to section 161 AktG

"The recommendations of the "*Government Commission German Corporate Governance Code*" as announced by the Federal Ministry of Justice in the official section of the Electronic Federal Gazette have been and are being complied with by the Supervisory Board of SolarWorld AG to the extent that these recommendations apply to it." As per the resolution passed on 9 August 2010 the declaration of compliance of 24 November 2009 was reiterated with regard to the version of the GCGC of 26 May 2010 as announced on 2 July 2010 and made permanently available to all shareholders in line with section 161 AktG.

In its meeting on 9 August 2010 the members of the Management Board of SolarWorld AG also passed a resolution on their declaration of compliance with the recommendations of the German Corporate Governance Code in its version of 26 May 2010 which in line with section 161 AktG will be made known to all shareholders as follows: "The recommendations of the "*Government Commission German Corporate Governance Code*" as announced by the Federal Ministry of Justice in the official section of the Electronic Federal Gazette have been and are being complied with by the Board of Management to the extent that these recommendations apply to it."

Statutory Auditors

The consolidated financial statements for the years ended on 31 December 2010 and 31 December 2009 of SolarWorld Group have been audited by BDO AG Wirtschaftsprüfungsgesellschaft (formerly: BDO Deutsche Warentreuhand Aktiengesellschaft Wirtschaftsprüfungsgesellschaft), Potsdamer Platz 5, 53119 Bonn, Germany, as the independent registered public accounting firm for SolarWorld. It is a member of the Chamber of Public Accountants

(Wirtschaftsprüferkammer, Körperschaft des öffentlichen Rechts). BDO AG Wirtschaftsprüfungsgesellschaft issued an unqualified auditor's opinion in each case.

Historical Financial Information

The consolidated financial statements for the year ended on 31 December 2010 and the unaudited consolidated interim financial statements for the first quarter ending on 31 March 2011 of SolarWorld Group are prepared on the basis of the International Financial Reporting Standards ("IFRS"), issued by the International Accounting Standards Board ("IASB"), as adopted by Regulation (EC) No. 1606/2002 of the European Parliament and of the Council on the application of international accounting standards in the European Union, and the additional requirements of the German commercial law pursuant to § 315a (1) HGB (German Commercial Code, *Handelsgesetzbuch*).

Significant Changes/Trend Information

Except as disclosed in this Prospectus, there have been neither significant changes in the financial or trading position of SolarWorld or SolarWorld Group since 31 March 2011, nor has there been a material adverse change in the prospects of SolarWorld or SolarWorld Group since 31 December 2010.

Legal and Arbitration Proceedings

Risks from litigation may exist, in particular from competition, anti-trust, environmental litigation or potential claims for damages in connection with product liability. SolarWorld Group attempts to avoid claims by applying strict quality and safety standards. Apart from those risks, SolarWorld Group companies are parties to various administrative, judicial or arbitration proceedings which arise in the ordinary course of their businesses, including in connection with their business activities, employees, investors and obligations as taxpayers. Most of these proceedings constitute ordinary, routine proceedings that are incidental to SolarWorld Group's business. However, it cannot be excluded that the final resolution of some of these proceedings could cause SolarWorld Group to incur considerable costs and cash outflows. Although the final resolution of any such proceeding could have a significant effect on SolarWorld Group earnings in any particular period, SolarWorld Group believes that any resulting obligations are unlikely to have a material adverse effect on the financial condition or profitability of SolarWorld or of SolarWorld Group. Finally, neither SolarWorld nor SolarWorld Group is aware of any governmental, legal or arbitration proceedings (including any such proceedings which are pending or threatened of which SolarWorld or SolarWorld Group is aware) which may have, or have had in the 12 months preceding the date of this document a significant effect on SolarWorld or SolarWorld Group's financial position or profitability.

Material Contracts

Except for the profit and loss transfer agreements entered into by SolarWorld with all major wholly owned subsidiaries in Germany, SolarWorld did not enter into any contracts outside the ordinary course of business, which could result in any member of the SolarWorld Group being under an obligation or entitlement that is material to SolarWorld's ability to meet its obligations to the holders in respect of the Notes.

As of 31 March 2011 the share capital of SolarWorld amounts to EUR 111,720,000, being divided into bearer shares of no par value with an imputed nominal value of EUR 1.00 which are fully paid up.

Recent Development/Outlook

Recent Developments

After the structural streamlining in 2009, the solar market leaped ahead by just under 90% in 2010. Solar modules with a total output of 13.8 (2009: 7.4) GW (gigawatts, "GW") were newly installed worldwide – and the cumulative solar power output exceeded the 30 GW mark (2009: 21 GW) for the first time. The solar sector reported the highest growth rate among the renewable energies. The

investment volume for solar energy increased by 49% and reached USD 89.3 billion. In this process, Europe was the strongest growth driver because European investments in solar energy went up by a total of 91% to USD 59.6 billion. (Source: Clean energy investment storms to new record in 2010, Bloomberg New Energy Finance, 11 January 2011)

The first quarter of 2011, on the other hand, had a slow start in the European solar markets. Regulatory uncertainties regarding the continuation of the incentive schemes for solar power as well as the winter months had a negative impact on European demand. Despite this, SolarWorld was able to increase shipments in the first quarter of 2011 over the same quarter of the previous year.

At the beginning of 2011, the Federal Ministry for Environment, Nature Conservation and Nuclear Safety and the solar industry agreed on a further reduction of feed-in compensation for solar power in Germany. The reason for the adjustment was the rapid growth of newly installed solar power capacity in Germany in the year 2010 to 7.4 (2009: 3.8) GW. At the beginning of February, the *Bundestag* (German Parliament) approved the amendment to the Renewable Energy Sources Act (EEG): On the basis of newly installed solar power output between March and May, a projection will be made for the year 2011. If the calculated annual value exceeds 3.5 GW, feed-in tariffs for solar power plants will be cut by 3% effective 1 July 2011. For every additional gigawatt, feed-in tariffs will be reduced by further 3%.

In the year 2010, solar plants worth more than 2.3 GW were installed and connected to the grid in Italy. As a result of the boom, the Italian government announced a fourth amendment to the law on funding solar power in Italy, which was officially released on 12 May 2011. It will come into force on 1 June 2011. It establishes tariff cuts starting in June 2011 as well as quotas defined ahead of time for large scale plants for the years 2011 and 2012. Roof-top systems are not capped by these quotas. The total financial incentives to be paid for the Italian government are capped at yearly maximal EUR 7 billion.

Other European markets like France, Belgium or Greece developed well in the first quarter of 2011 albeit at a much lower level than Italy or Germany.

A different situation prevails in the United States. After an impressive growth in the year 2010 with demand doubling up to 878 MW (2009: 435 MW), the U.S. solar market continued to rise in the first quarter of 2011. Not only California developed excellently but other states like New Jersey, Colorado and Pennsylvania made significant contributions to the solar market expansion. A stable legal situation, smooth approval processes as well as a by now well established distribution channel networks are the important factors that accelerate growth. Thanks to its production facilities in the USA as well as its rising client basis acquired during the last years on this market, SolarWorld was able to profit from the strong U.S. market development. Already by the end of the first quarter 2011, the company had sold almost half as many products as during the whole year 2010.

Asian markets also showed an important development. For example, in the first quarter 2011 SolarWorld supplied modules with a total output of 5 MW for a large scale plant in the state of Gujarat, India.

Outlook

SolarWorld expects a slight growth of the international solar market for the year 2011, though not as high in the year 2010. In the European markets the biggest part of the growth should happen in the roof-top market segment, while in America and Asia roof-top systems but also large-scale solar power plants should be main market drivers. For the year 2011 the European Photovoltaic Industry Association ("EPIA") expects a global newly installed output capacity between 15 GW and 21 GW (Source: Global market outlook for photovoltaics until 2015).

In Germany, a decline of the solar market is forecasted even though it can be expected to remain one of the largest markets for solar products worldwide. For the year 2011, EPIA projects new solar plants in Germany with an output capacity between 3 GW and 5 GW (2010: 7.4 GW) (Source: Global market outlook for photovoltaics until 2015). SolarWorld currently expects a feed-in tariff cut by 6% on 1 July 2011. A slight pull-forward effect may occur in the market so that SolarWorld awaits a pick-up of demand for solar plants in the second quarter of 2011.

For Italy, EPIA also expects new installations between 3 and 5 GW for the year 2011 (2010: 2.3 GW) (Source: Global market outlook for photovoltaics until 2015). SolarWorld expects especially building-

integrated photovoltaic ("BIPV") to show a positive dynamism in the future, since according to the new incentive law starting on 1 June 2011 (Quattro Conto Energia), the installation of BIPV with up to 1 MW output capacity is not capped (Source: www.gse.it).

In the United States, EPIA forecasts for the year 2011 a continued steep growth with a demand between 1,500 MW and 3,000 MW (2010: 878 MW) (Source: Global market outlook for photovoltaics until 2015). Significant improvement of financing conditions has led to a higher willingness to invest in solar systems. Unlike in Europe, SolarWorld expects a strong increase in the free-field market here because in many states utilities are obliged to show a minimum share of solar power in their portfolio (Renewable Portfolio Standards). In addition, the tax breaks for the realisation of large-scale projects are extremely attractive. California continues to be the most important solar market in the USA although it has ceased to be the only driving state. Other U.S. states like New Jersey, Nevada, Arizona, Colorado, Pennsylvania and New Mexico have become important sales regions for the solar market and will continue to grow in the future (Source: U.S. solar market insight – 2010 year in review).

SolarWorld intends to persistently pursue its strategy of a fully integrated global solar technology group. This is why SolarWorld intends to continue to invest in the core markets of Germany and the United States. SolarWorld Group plans to further expand its module production capacities to compensate for falling solar module prices by means of an increase in shipments.

SolarWorld intends to continue to focus on the quality of its products and the satisfaction of its customers. In parallel, SolarWorld plans to also invest in the further development of the SolarWorld brand through international marketing campaigns tailored to the individual cultural requirements of each target market. In 2011, the company's strategic focus will be however on the expansion of the growing U.S. market. At the same time, SolarWorld plans to tap into the growth markets of Asia and Africa. Increasing brand and product awareness in the young solar markets in Europe and the United States will continue to be a priority. The objective is to reach the relevant target groups and to develop SolarWorld's position as a quality provider under the umbrella of a strong brand.

SolarWorld Group plans to increase its sales volume by more than 30% in fiscal year 2011. Provided that the background conditions are stable, the company forecasts to top the previous year's revenue level of EUR 1.3 billion. Within the next two years SolarWorld wants to further boost its share of foreign revenue up to 75%.

- (c) die Nachfolgeschuldnerin sich verpflichtet hat, jeden Gläubiger hinsichtlich solcher Steuern, Abgaben oder behördlichen Lasten freizustellen, die einem Gläubiger bezüglich der Ersetzung auferlegt werden;
- (d) die Emittentin unwiderruflich und unbedingt gegenüber den Gläubigern die Zahlung aller von der Nachfolgeschuldnerin auf die Schuldverschreibungen zahlbaren Beträge zu Bedingungen garantiert, die den Bedingungen des dem Zahlstellvertrag anhängenden Musters einer unwiderruflichen und unbedingten Garantie der Emittentin entsprechen; und
- (e) die Emittentin eine Bestätigung bezüglich der betroffenen Rechtsordnungen von anerkannten Rechtsanwälten bei einer dafür beauftragten Stelle verfügbar macht, dass die Bestimmungen in den vorstehenden Unterabsätzen (a), (b), (c) und (d) erfüllt wurden.

Für die Zwecke dieses § 10 bedeutet "verbundenes Unternehmen" ein verbundenes Unternehmen im Sinne von § 15 AktG (Aktiengesetz).

- (b) the Substitute Debtor has obtained all necessary authorisations and may transfer to the Principal Paying Agent in the currency required and without being obligated to deduct or withhold any taxes or other duties of whatever nature levied by the country in which the Substitute Debtor or the Issuer has its domicile or tax residence, all amounts required for the fulfilment of the payment obligations arising under the Notes;

note representing the Notes. For purposes of the foregoing, "Custodian" means any bank or other financial institution of recognised standing authorised to engage in securities custody business with which the Holder maintains a securities account in respect of the Notes and includes the Clearing System. Each Holder may, without prejudice to the foregoing, protect and enforce his rights under these Notes also in any other way which is admitted in the country of the Proceedings.

§ 16 LANGUAGE

These Conditions of Issue are written in the German language. The German text shall be controlling and binding. The English language translation is provided for convenience only.

SHORT DESCRIPTION OF RULES REGARDING RESOLUTIONS OF HOLDERS

Pursuant to the Conditions of Issue, the Holders of the Notes may agree to amendments of the Conditions of Issue or decide on matters relating to the Notes with binding effect on all Holders by way of resolution to be passed in meetings of Holders. Any such resolution duly adopted by resolution of the Holders shall be binding on each Holder of the Notes irrespective of whether such Holder took part in the vote and whether such Holder voted in favour or against such resolution.

In addition to the provisions included in the Conditions of Issue, the rules regarding the convening of meetings, the passing and publication of resolutions as well as their implementation and challenge before German courts are set out in Annex 2 to the Paying Agency Agreement to which the Conditions of Issue fully refer. Under the Act on Debt Securities (*Schuldverschreibungsgesetz*), these rules are largely mandatory, although they permit in limited circumstances supplementary provisions set out in or incorporated into the Conditions of Issue.

The following is a brief summary of some of the statutory rules regarding the convening and conduct of meetings of Holders, the passing and publication of resolutions as well as their implementation and challenge before German courts.

Holders' Meetings may be convened by the Issuer and, where so appointed by a Holders' resolution, by the Holders' Representative. Holders' Meetings must be convened if one or more Holders holding 5% or more of the outstanding Notes so require for specified reasons permitted by the statute.

Meetings may be convened not less than 14 days before the date of the meeting. Attendance and voting at the meeting may be made subject to prior registration of Holders. The convening notice will provide what proof will be required for attendance and voting at the meeting. The place of the meeting in respect of a German issuer is the place of the issuer's registered office, provided, however, that where the relevant Notes are listed on a stock exchange within the European Union or the European Economic Area, the meeting may be held at the place of such stock exchange.

The convening notice must include relevant particulars and must be made publicly available together with the agenda of the meeting setting out the proposals for resolution.

Each Holder may be represented by proxy.

A quorum exists if Holders representing by value not less than 50% of the outstanding Notes are present or represented at the meeting. If the quorum is not reached, a second meeting may be called at which no quorum will be required, provided that where a resolution may only be adopted by a qualified majority, a quorum requires the presence of at least 25% of the aggregate principal amount of outstanding Notes.

All resolutions adopted must be properly published. In the case of Notes represented by one or more Global Notes, resolutions which amend or supplement the Conditions of Issue have to be implemented by supplementing or amending the relevant Global Note(s).

In insolvency proceedings instituted in Germany against an Issuer, a Holders' Representative, if appointed, is obliged and exclusively entitled to assert the Holders' rights under the Notes. Any resolutions passed by the Holders are subject to the provisions of the Insolvency Code (*Insolvenzordnung*).

If a resolution constitutes a breach of the statute or the Conditions of Issue, Holders may bring an action to set aside such resolution. Such action must be filed with the competent court within one month following the publication of the resolution.

TAXATION

The following is a general description of certain tax considerations relating to the Notes in Germany and Luxembourg. It does not purport to be a complete analysis of all tax considerations relating to the Notes. Prospective purchasers of Notes should consult their tax advisers as to the consequences, under the tax laws of the country in which they are resident for tax purposes and under the tax laws of Germany and Luxembourg of acquiring, holding and disposing of Notes and receiving payments of principal, interest and other amounts under the Notes. This summary is based upon the laws in force and their interpretation on the date of this Prospectus and is subject to any change in law or interpretation that may take effect after such date.

Federal Republic of Germany

Income tax

Notes held by tax residents as private assets

- Taxation of interest

Payments of interest on the Notes to Holders who are tax residents of the Federal Republic of Germany (i.e., persons whose residence or habitual abode is located in the Federal Republic of Germany) are subject to German income tax. In each case where German income tax arises, a solidarity surcharge (*Solidaritätszuschlag*) is levied in addition. Furthermore, church tax may be levied, where applicable. If coupons or interest claims are disposed of separately (i.e. without the Notes), the proceeds from the disposition are subject to income tax. The same applies to proceeds from the redemption of coupons or interest claims if the Note is disposed of separately.

On payments of interest on the Notes to individual tax residents of the Federal Republic of Germany income tax is generally levied as a flat income tax at a rate of 25% (plus solidarity surcharge in an amount of 5.5% of such tax, resulting in a total tax charge of 26.375%). The total investment income of an individual will be decreased by a lump sum deduction (*Sparer-Pauschbetrag*) of EUR 801 (EUR 1,602 for married couples filing jointly), not by a deduction of expenses actually incurred.

If the Notes are held in a custodial account which the Holder maintains with a German branch of a German or non-German bank or financial services institution or with a securities trading business or bank in the Federal Republic of Germany (the "Disbursing Agent") the flat income tax will be levied by way of withholding at the aforementioned rate from the gross interest payment to be made by the Disbursing Agent.

In general, no withholding tax will be levied if the Holder is an individual (i) whose Note does not form part of the property of a trade or business and (ii) who filed a withholding exemption certificate (*Freistellungsauftag*) with the Disbursing Agent but only to the extent the interest income derived from the Note together with other investment income does not exceed the maximum exemption amount shown on the withholding exemption certificate. Similarly, no withholding tax will be deducted if the Holder has submitted to the Disbursing Agent a certificate of non-assessment (*Nichtveranlagungsberechtigung*) issued by the relevant local tax office.

If no Disbursing Agent (as defined above) is involved in the payment process the Holder will have to include its income on the Notes in its tax return and the flat income tax of 25% plus solidarity surcharge will be collected by way of assessment.

Payment of the flat income tax will generally satisfy any income tax liability of the Holder in respect of such investment income. Holders may apply for a tax assessment on the basis of general rules applicable to them if the resulting income tax burden is lower than 25%.

- Taxation of capital gains

From 1 January 2009, also capital gains realised by individual tax residents of the Federal Republic of Germany from the disposition or redemption of the Notes acquired after 31 December 2008 will be subject to the flat income tax on investment income at a rate of 25% (plus solidarity surcharge in an amount of 5.5% of such tax, resulting in a total tax charge of 26.375%), irrespective of any holding period. This will also apply to Notes on which the principal is effectively repaid in whole or in part although the repayment was not guaranteed.

If the Notes are held in a custodial account which the Holder maintains with a Disbursing Agent (as defined above) the flat income tax will be levied by way of withholding from the difference between the redemption amount (or the proceeds from the disposition) and the issue price (or the purchase price) of the Notes. If the Notes have been transferred into the custodial account of the Disbursing Agent only after their acquisition, and no evidence on the acquisition date has been provided to the new Disbursing Agent by the Disbursing Agent which previously kept the Notes in its custodial account, withholding tax will be levied on 30% of the proceeds from the disposition or redemption of the Notes.

If no Disbursing Agent is involved in the payment process the Holder will have to include capital gains from the disposition or redemption of the Notes in its tax return and the flat income tax of 25% plus solidarity surcharge will be collected by way of assessment.

Payment of the flat income tax will generally satisfy any income tax liability of the Holder in respect of such investment income. Holders may apply for a tax assessment on the basis of general rules applicable to them if the resulting income tax burden is lower than 25%.

Notes held by tax residents as business assets

Payments of interest on Notes and capital gains from the disposition or redemption of Notes held as business assets by German tax resident individuals or corporations (including via a partnership, as the case may be), are generally subject to German income tax or corporate income tax (in each case plus solidarity surcharge). The interest and capital gain will also be subject to trade tax if the Notes form part of the property of a German trade or business.

If the Notes are held in a custodial account which the Holder maintains with a Disbursing Agent (as defined above) tax at a rate of 25% (plus a solidarity surcharge of 5.5% of such tax) will also be withheld from interest payments on Notes and (since 1 January 2009) generally also from capital gains from the disposition or redemption of Notes held as business assets. In these cases the withholding tax does not satisfy the income tax liability of the Holder, as in the case of the flat income tax, but will be credited as advance payment against the personal income or corporate income tax liability and the solidarity surcharge of the Holder.

With regard to capital gains no withholding will generally be required in the case of Notes held by corporations resident in Germany, provided that in the case of corporations of certain legal forms the status of corporation has been evidenced by a certificate of the competent tax office, and upon application in the case of Notes held by individuals or partnerships as business assets.

Notes held by non-residents

Interest and capital gains are not subject to German taxation in the case of non-residents, i.e. persons having neither their residence nor their habitual abode nor legal domicile nor place of effective management in the Federal Republic of Germany, unless the Notes form part of the business property of a permanent establishment maintained in the Federal Republic of Germany. Interest may, however, also be subject to German income tax if it otherwise constitutes income taxable in Germany, such as income from the letting and leasing of certain German-situs property or income from certain capital investments directly or indirectly secured by German situs real estate.

Non-residents of the Federal Republic of Germany are in general exempt from German withholding tax on interest and capital gains and from solidarity surcharge thereon. However, if the interest or capital gain is subject to German taxation as set forth in the preceding paragraph and the Notes are held in a custodial account with a Disbursing Agent (as defined above), withholding tax will be levied as explained above at "*Notes held by tax residents as business assets*" or at "*Notes held by tax residents as private assets*", respectively.

Inheritance and Gift Tax

No inheritance or gift taxes with respect to any Note will generally arise under the laws of the Federal Republic of Germany, if, in the case of inheritance tax, neither the decedent nor the beneficiary, or, in the case of gift tax, neither the donor nor the donee, is a resident of the Federal Republic of Germany and such Note is not attributable to a German trade or business for which a permanent establishment is maintained, or a permanent representative has been appointed, in the Federal Republic of Germany. Exceptions from this rule apply to certain German citizens who previously maintained a residence in the Federal Republic of Germany.

Other Taxes

No stamp, issue, registration or similar taxes or duties will be payable in the Federal Republic of Germany in connection with the issuance, delivery or execution of the Notes. Currently, net assets tax (*Vermögensteuer*) is not levied in the Federal Republic of Germany.

Luxembourg

Non-Residents

Under the existing laws of Luxembourg and except as provided for by the Luxembourg laws of 21 June 2005 implementing the EU Savings Tax Directive (as defined below), there is no withholding tax on the payment of interest on, or reimbursement of principal of, the Notes made to non-residents of Luxembourg.

Under the Luxembourg laws of 21 June 2005 implementing the EU Savings Tax Directive and as a result of ratification by Luxembourg of certain related Accords with the relevant dependent and associated territories, payments of interest or similar income made or ascribed by a paying agent established in Luxembourg to or for the immediate benefit of an individual holder of a Note or certain residual entities, who, as a result of an identification procedure implemented by the paying agent, are identified as residents or are deemed to be residents of an EU Member State other than Luxembourg or certain of those dependent or associated territories referred to under "*EU Savings Tax Directive*" below, will be subject to a withholding tax unless the relevant beneficiary has adequately instructed the relevant paying agent to provide details of the relevant payments of interest or similar income to the fiscal authorities of his/her country of residence or deemed residence or, in the case of an individual holder of a Note, has provided a tax exemption certificate from his/her fiscal authority in the format required by law to the relevant paying agent. Where withholding tax is applied, it will be levied at a rate of 20% until 30 June 2011 and at a rate of 35% thereafter.

Residents

According to the law of 23 December 2005, as amended, interest on Notes paid by a Luxembourg paying agent or paying agents established in the EU, the EEA or in a State which has concluded an international agreement related to the EU Savings Tax Directive to an individual holder of Notes who is a resident of Luxembourg or to a residual entity established in another EU Member State or in the dependent and associated territories (as defined under the EU Savings Tax Directive) securing the payment for such individual will be subject to a withholding tax of 10%. In case of payment through a paying agent established in the EU, the EEA or in a State which has concluded an international agreement related to the EU Savings Tax Directive, the Luxembourg resident individual holder of Notes must under a specific procedure remit 10% tax to the Luxembourg Treasury.

If the individual Holder holds the Notes in the course of the management of his or her private wealth, the aforementioned 10% withholding tax will operate a full discharge of income tax due on such payments.

Interest on Notes paid by a Luxembourg paying agent to a resident Holder of Notes who is not an individual is not subject to withholding tax.

When used in the preceding paragraphs "interest", "paying agent" and "residual entity" have the meaning given thereto in the Luxembourg laws of 21 June 2005 (or the relevant Accords) and 23 December 2005, as amended. "Interest" will include accrued or capitalised interest at the sale, repayment or redemption of the Notes.

Payments of interest or similar income under the Notes to Clearstream Banking AG, Clearstream Banking, société anonyme and Euroclear Bank SA/NV and payments by or on behalf of Clearstream Banking, société anonyme to financial intermediaries will not give rise to a withholding tax under Luxembourg law.

EU Savings Tax Directive

Under the EU Council Directive 2003/48/EC dated 3 June 2003 on the taxation of savings income in the form of interest payments (the "EU Savings Tax Directive") each EU Member State must require paying agents (within the meaning of such directive) established within its territory to provide to the competent authority of this state details of the payment of interest made to any individual resident in

another EU Member State as the beneficial owner of the interest. The competent authority of the EU Member State of the paying agent is then required to communicate this information to the competent authority of the EU Member State of which the beneficial owner of the interest is a resident.

For a transitional period, Austria and Luxembourg may opt instead to withhold tax from interest payments within the meaning of the EU Savings Tax Directive at a rate of 20% from 1 July 2008, and of 35% from 1 July 2011. As from 1 January 2010, Belgium applies the information procedure described above as from 2010.

In Germany, provisions for implementing the EU Savings Tax Directive were enacted by legislative regulations of the Federal Government. These provisions apply since 1 July 2005.

SUBSCRIPTION, SALE AND OFFER OF THE NOTES

General

SolarWorld Aktiengesellschaft has agreed in an agreement to be signed on or about 27 June 2011 to sell to Commerzbank Aktiengesellschaft and Deutsche Bank AG, London Branch (the "Joint Lead Managers" or the "Managers") and the Managers have agreed, subject to certain customary closing conditions, to purchase, the Notes on 29 June 2011 at a price of 1 % of their aggregate principal amount (the "Issue Price"). Proceeds to the Issuer will be net of commissions of up to 0.60% of the aggregate principal amount of the Notes payable to the Managers. The Issuer has furthermore agreed to reimburse the Managers for certain expenses incurred in connection with the issue of the Notes.

The Managers are entitled, under certain circumstances, to terminate the agreement reached with the Issuer. In such event, no Notes will be delivered to investors. Furthermore, SolarWorld Aktiengesellschaft has agreed to indemnify the Managers against certain liabilities in connection with the offer and sale of the Notes.

The Managers or their affiliates have provided from time to time, and expect to provide in the future, investment services to the Issuer and its affiliates, for which the Managers or their affiliates have received or will receive customary fees and commissions.

There are no interests of natural and legal persons other than the Issuer involved in the issue, including conflicting ones that are material to the issue.

Offer of the Notes

Offer Period and determination of Pricing Details

The Notes will be offered to investors by the Managers during an offer period which will commence not earlier than 17 June 2011 and will end on 29 June 2011 subject to any shortening or extension of the offer period. During the offer period, investors may submit orders to the Managers. On the basis of the orders received by the Managers the Issue Price, the rate of interest, the number of notes to be issued, the aggregate principal amount and the yield of the issue will be determined on the pricing date which is expected to be on or about 22 June 2011. The results of the offer and the Issue Date will be included in a notice which will be filed with the CSSF and published on the website of the Luxembourg Stock Exchange (www.bourse.lu) on or about the pricing date (the "Pricing Notice"). Any onsale of Notes will be subject to market conditions. Should the Issuer and the Managers determine any shortening or extension of the offer period, which could be the result of changing market conditions, such changes will be notified in the same manner as the pricing details will be published, or, if applicable, a supplement to the Prospectus will be prepared and published in accordance with Article 13 of the Luxembourg law relating to prospectuses for securities.

Public Offer

The Notes will be sold to institutional investors and retail investors in compliance with the public offer restrictions in all countries in the European Union. A public offer may be made in Luxembourg and following the notification of the Prospectus by the CSSF according to Article 18 of the Prospectus Directive also in Germany, The Netherlands and Austria.

Conditions and technical details of the Offer

The following sets out details of the offer which is required to comply with the requirements of the applicable prospectus regulation. There are no conditions to which the offer is subject. Any offer to investors to purchase Notes will be made through, and investors may submit their offers to buy Notes, using the information system Bloomberg or any other commonly used information systems. Following the publication of the Pricing Notice, the Managers will offer the Notes upon request through banking institutions in Luxembourg, Germany, The Netherlands and Austria. Subscription rights for the Notes will not be issued. Therefore, there are no procedures for the exercise of any right of pre-emption, the negotiability of subscription rights and the treatment of subscription rights not exercised. Any investor who has submitted an order in relation to the Notes whose order is accepted will receive a confirmation by electronic mail, fax or through commonly used information systems relating to the respective allotment of Notes. Before an investor receives a confirmation from the Managers that its

purchase order for the Notes has been accepted, the investor may reduce or withdraw its purchase orders. Each investor will receive a confirmation relating to the results of the offer relating to the respective allotment of the Notes. There is no minimum or maximum amount of Notes to be purchased. Investors may place offers to purchase Notes in any amount.

Confirmation in relation to an order and allotments as well as delivery of the Notes

Following the pricing of the Notes and confirmation which orders have been accepted and which amounts have been allotted to particular investors, delivery and payment of the Notes will be made within five business days after the date of pricing of the Notes and the confirmation of the allotment to investors. The Notes will be delivered via book-entry through the Clearing System and its account-holding banks against payment of the Issue Price.

Charges and costs relating to the Offer

The Issuer will not charge any costs, expenses or taxes directly to any investor. Investors must inform themselves about any costs, expenses or taxes in connection with the purchase of Notes which are generally applicable in their respective country of residence, including any charges of their own depository banks in connection with the purchase or holding of securities.

Method of determination of the Issue Price and the rate of interest

The rate of interest and the Issue Price for the Notes will be determined at the time of pricing on the basis of a yield which is determined by adding a credit spread to the level of the Midswaps at the time of pricing. The pricing spread will be determined on the basis of the orders of the investors which are received and confirmed by the Managers. The level of the Midswaps will be determined as the average yield of the bid and ask prices of Interest-Swap Transactions ("Midswaps") with a maturity similar to the maturity of the Notes shown on the Reuters page ICAPEURO or on any other screen page which is conventionally used to price Eurobond transactions at the time of pricing. The resulting yield will be used to determine an Issue Price (which is expected to be less than par) and a rate of interest (which is expected to be a percentage figure which can be evenly divided by 1/8 of a full per cent. and which will be correspondingly higher if a higher Issue Price is determined and which will be correspondingly lower if a lower Issue Price is determined), all to correspond to the yield which reflects the level of the Midswaps and the pricing spread. In the event that the figures for the relevant Midswaps are not available on the relevant screen page as set out above then the relevant figures shall be determined in a manner which banks and other institutional market participants apply at that time. The resulting figure will represent the yield of the Notes and such yield will be used to determine the rate of interest and the Issue Price.
